

Foundation Day Message of CMD

Dear Colleagues,

I am privileged to address you on the Foundation Day of Hindustan Copper Limited.

HCL was established as a Public Sector Company on 9th November 1967 to make the country self-reliant in Copper.

With all the operating mining leases of Copper ore in India, HCL remains the only vertically integrated Copper producing Company in the country.

Conferred with the status of Miniratna (Category – I) in 2008, the Company's cutting edge lies in harnessing and exploiting India's Copper mineral resources for the benefit of the nation.

It has been a long journey for HCL since the day of inception.

Khetri mine in Rajasthan was the first project to be handed over to the Company in 1967. Subsequently, smelting and refining facilities were added.

In September 1972, the Govt. of India nationalized Indian Copper Corporation Ltd., established by a British Company in 1930, and merged it with HCL as Indian Copper Complex. Today it falls in the state of Jharkhand.

Malanjkhand Copper Project in Madhya Pradesh was established in 1982. Initial project was set up by Hindustan Copper Ltd. to exploit the Copper ore through an open pit mine. In 2015, underground mine expansion has been initiated and it is soon to be the largest base metal mine in the country.

The Taloja Copper Project, Maharashtra, was set up in December 1989, based on technology sourced from Southwire, USA.

Jhagadia Copper Limited in Gujarat was taken over by HCL in April 2015 and was rechristened as Gujarat Copper Project (GCP), the fifth Unit of the Company.

Re-starting of Jhagadia Copper Plant, besides enhancing production capacity of HCL, will also give boost to recycling of Copper including processing of e-scrap in an environment-friendly manner in the Country.

HCL products are acknowledged for their superior quality and reliability. The main products are Copper Concentrate, Copper Cathodes and Continuous Cast Copper Rods.

The Company also offers allied by-products like Nickel Cathode, Anode Slime (containing precious metals), Sulphuric Acid, and Copper Sulphate etc.

The Company has also played a catalytic role in the sustainable socio-economic development in the region where its mines and plants are located, aiming at a holistic regional development

Copper is one of the most versatile metals known to man across civilizations. Acknowledged the world over for its eternal properties, its use is manifested in a wide range of applications cutting across industries as diverse as electrical, automobile, telecommunications, refrigeration, defense, construction and architecture, to name a few.

Human civilization started with Copper. In ancient Egypt, Copper was symbolized by Ankh in Egyptian hieroglyphics which stood for eternal life and endurance. HCL's logo inspired by Ankh in Egyptian reflects the same resilience of man and the metal.

Our strength lies in our camaraderie, our sincerity and our collective skills. Together we can overpower any negativity and brave all storm.

Thus, we, the people of Hindustan Copper Limited, in the service of the nation, carry forward the undying spirit of this amazingly versatile metal.

Wishing you all good times and prosperity!
