CVO's Message

One more precious life that of Narender Kumar lost under the wheels of a monster truck being driven away from the site of illegal mining, in MP. Last year it was Yashwant Sonawane - additional district collector of Malegaon, who was burnt alive while on duty by the oil adulteration mafia at Manmad near Nasik. This year it was Narender Kumar, and many after him who went down fighting. There was S.P Mahantesh - an administrative official who was brutally attacked and killed as he exposed scams in Bangalore based cooperative societies. The list seem endless. Some seven years back the nation woke up to the murder of Manjunath Shanmugum - an IIM graduate, working with IOC who was shot dead as he was doing his inspection rounds. Loss of such professionally qualified self-driven individuals just on the ground of wanting to do the job right reflects on our moral bankruptcy as we stop at nothing to sink deeper and hurt ourselves. This psyche is all pervasive and not restricted to urban / technical elite.

Take the case of Vittal Gite — a farmer in Beed who found to his dismay that teachers at a state-run school were pocketing grants meant for students. When he voiced his protests, he was attacked with sickles and eventually died of his injuries. Similarly Ramdas Patil, a milkseller in Nanded, Maharashtra, was killed when trying to oppose the sand mafia, and Satish Shetty, who exposed land scams in the Talegaon-Lonavala areas, was stabbed to death. A new name and a different venue – the headline stays broadly the same. Perhaps we have decided to go with the flow, because compliance is easier than fighting it. But every crisis is an opportunity and this one most certainly is.

In *Ignited Minds*, Dr A.P.J. Abdul Kalam perhaps talks about this *mindset of defeat* that has “gripped our national psyche”, which is where we need to work. He also talks about the need to develop “that conviction in ourselves and discarding the things that hold us back”. According to Dr. Kalam, we should believe in our goals, then only “what we dream of can become reality”. It is with this aim in view we observe Vigilance Awareness Week (VAW) annually that seeks to reaffirm our commitment to promote vigilance awareness and to rededicate ourselves to the cause of fighting corruption. The war against corruption will be tough and long, but it must be fought hard and won. Collective action by all the stakeholders is a prerequisite in this effort. The challenge is now to think through the delivery mechanism in a process oriented way. We now need to think out of the box – something radical.

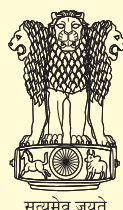

To curb the menace of corruption that is anti-growth and anti-people and ensure integrity in public administration, incentives for rent seeking must be reduced, and use of IT towards improved transparency that reduces the interface with the service delivery agents can not be over emphasized. Processes have to be changed so that there is no opportunity for people to be corrupt.

In this issue, we focus on some transparency initiatives elsewhere and some used in-house that have changed the way Hindustan Copper conducts business today. Our salute to them on the eve of VAW Celebrations 2012.

Dr. Srabani Guha
Chief Vigilance Officer

Remember, we are only a phone call away

Prime Minister's Message

प्रधान मंत्री
Prime Minister

I am glad to learn that the Central Vigilance Commission is observing Vigilance awareness Week from 31 October to 5 November, 2011.

Corruption strikes at the root of good governance. It is a challenge which has to be faced frontally, boldly and quickly. Not only is the government working on the establishment of a strong legal and constitutional framework to tackle corruption, but it is also focusing equally on simplification of procedures, reducing discretion, eliminating arbitrariness and increasing transparency in the way government functions.

I appreciate the efforts of the Central Vigilance Commission and other anti-corruption institutions in tackling this problem. We must work collectively, to find credible approaches and credible solutions to this scourge.

Manmohan Singh

Leader of Opposition's (Sushma Swaraj's) Message

सुषमा स्वराज
Sushma Swaraj

मुझे यह जानकर अत्यन्त प्रसन्नता हुई कि केन्द्रीय सतर्कता आयोग प्रतिवर्ष सतर्कता जागरण सप्ताह मनाता है। इस वर्ष इस सप्ताह का आयोजन 31 अक्टूबर से 5 नवम्बर तक किया जा रहा है।

भ्रष्टाचार उन्मूलन की दिशा में आयोग का यह एक सराहनीय प्रयास है। इस वर्ष तो इस सप्ताह का महत्व और भी ज़्यादा बढ़ गया है क्योंकि एक साथ भ्रष्टाचार के अनेक प्रकरण उजागर होने के कारण भ्रष्टाचार देश में एक प्रमुख मुद्दा बन गया है। भ्रष्टाचार मिटाने का सबसे प्रभावी उपाय है कि हर व्यक्ति अपने बारे में तय करे कि वो ईमानदारी से कार्य करेगा। दूसरों के माथे दोष मढ़ने की बजाय यदि हर व्यक्ति अपने बारे में संकल्पित हो जाए तो उसका सामूहिक असर भ्रष्टाचार को जड़ से उखाड़ फेंकेगा। मैंने उस प्रतिज्ञा को ध्यान से पढ़ा है जो 31 अक्टूबर को प्रातः 11 बजे ली जायेगी। उसका अंतिम वाक्य इस अभियान का प्राण है कि “हम अपने कर्तव्य का पालन पूर्ण ईमानदारी से करेंगे और भय अथवा पक्षपात के बिना कार्य करेंगे”। यदि यह संकल्प सब लोग पूर्ण निष्ठा से निभायें तो भ्रष्टाचार उन्मूलन की दिशा में एक बहुत सार्थक पहल होगी।

Minister of Mines, Dinsha Patel's Message

We are observing Vigilance Awareness Week from 31st October, 2011 to 5th November, 2011. This year the major thrust is on Participative Vigilance. Corruption impedes the growth and progress of a nation. The efforts made by Government for rapid economic growth cannot succeed without the co-operation of public in prevention of corruption.

There is an utmost need to generate awareness amongst the public to highlight the value of their participation in prevention of corruption. By increasing their participation we will be able to eradicate corruption to a great extent and improve governance. I sincerely hope that this year Vigilance Awareness Week will help in generating awareness among the public about the ill effects of corruption on governance and the progress of the nation and their role in eradicating corruption.

New Delhi

CMD's Message

Chairman-cum-Managing Director

I am pleased to note that the Corporate Vigilance is bringing out yet another issue of C/o Conscience. At this crucial juncture, when corruption is on the centre stage of national agenda, I heartily complement the efforts of our Vigilance Department in creating awareness about ethics and best practices through this remarkable journal.

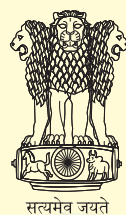

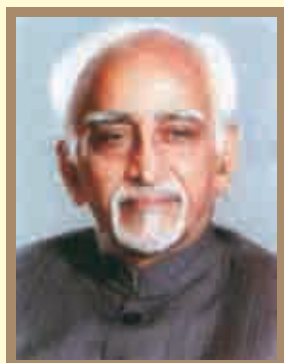

HCL is firmly committed to the policy of “zero tolerance” towards corruption and total transparency and ethics in its dealings.

I am sure the current issue of C/o Conscience will go a long way in building a conscientious and ethical organization, where one can dream of working fearlessly with the head held high, in the best interest of the organization and the country.

A handwritten signature in dark ink, appearing to read 'K. D. Diwan', with a horizontal line underneath.

K. D. Diwan

Vice-President's Message

उप-राष्ट्रपति, भारत
VICE-PRESIDENT OF INDIA

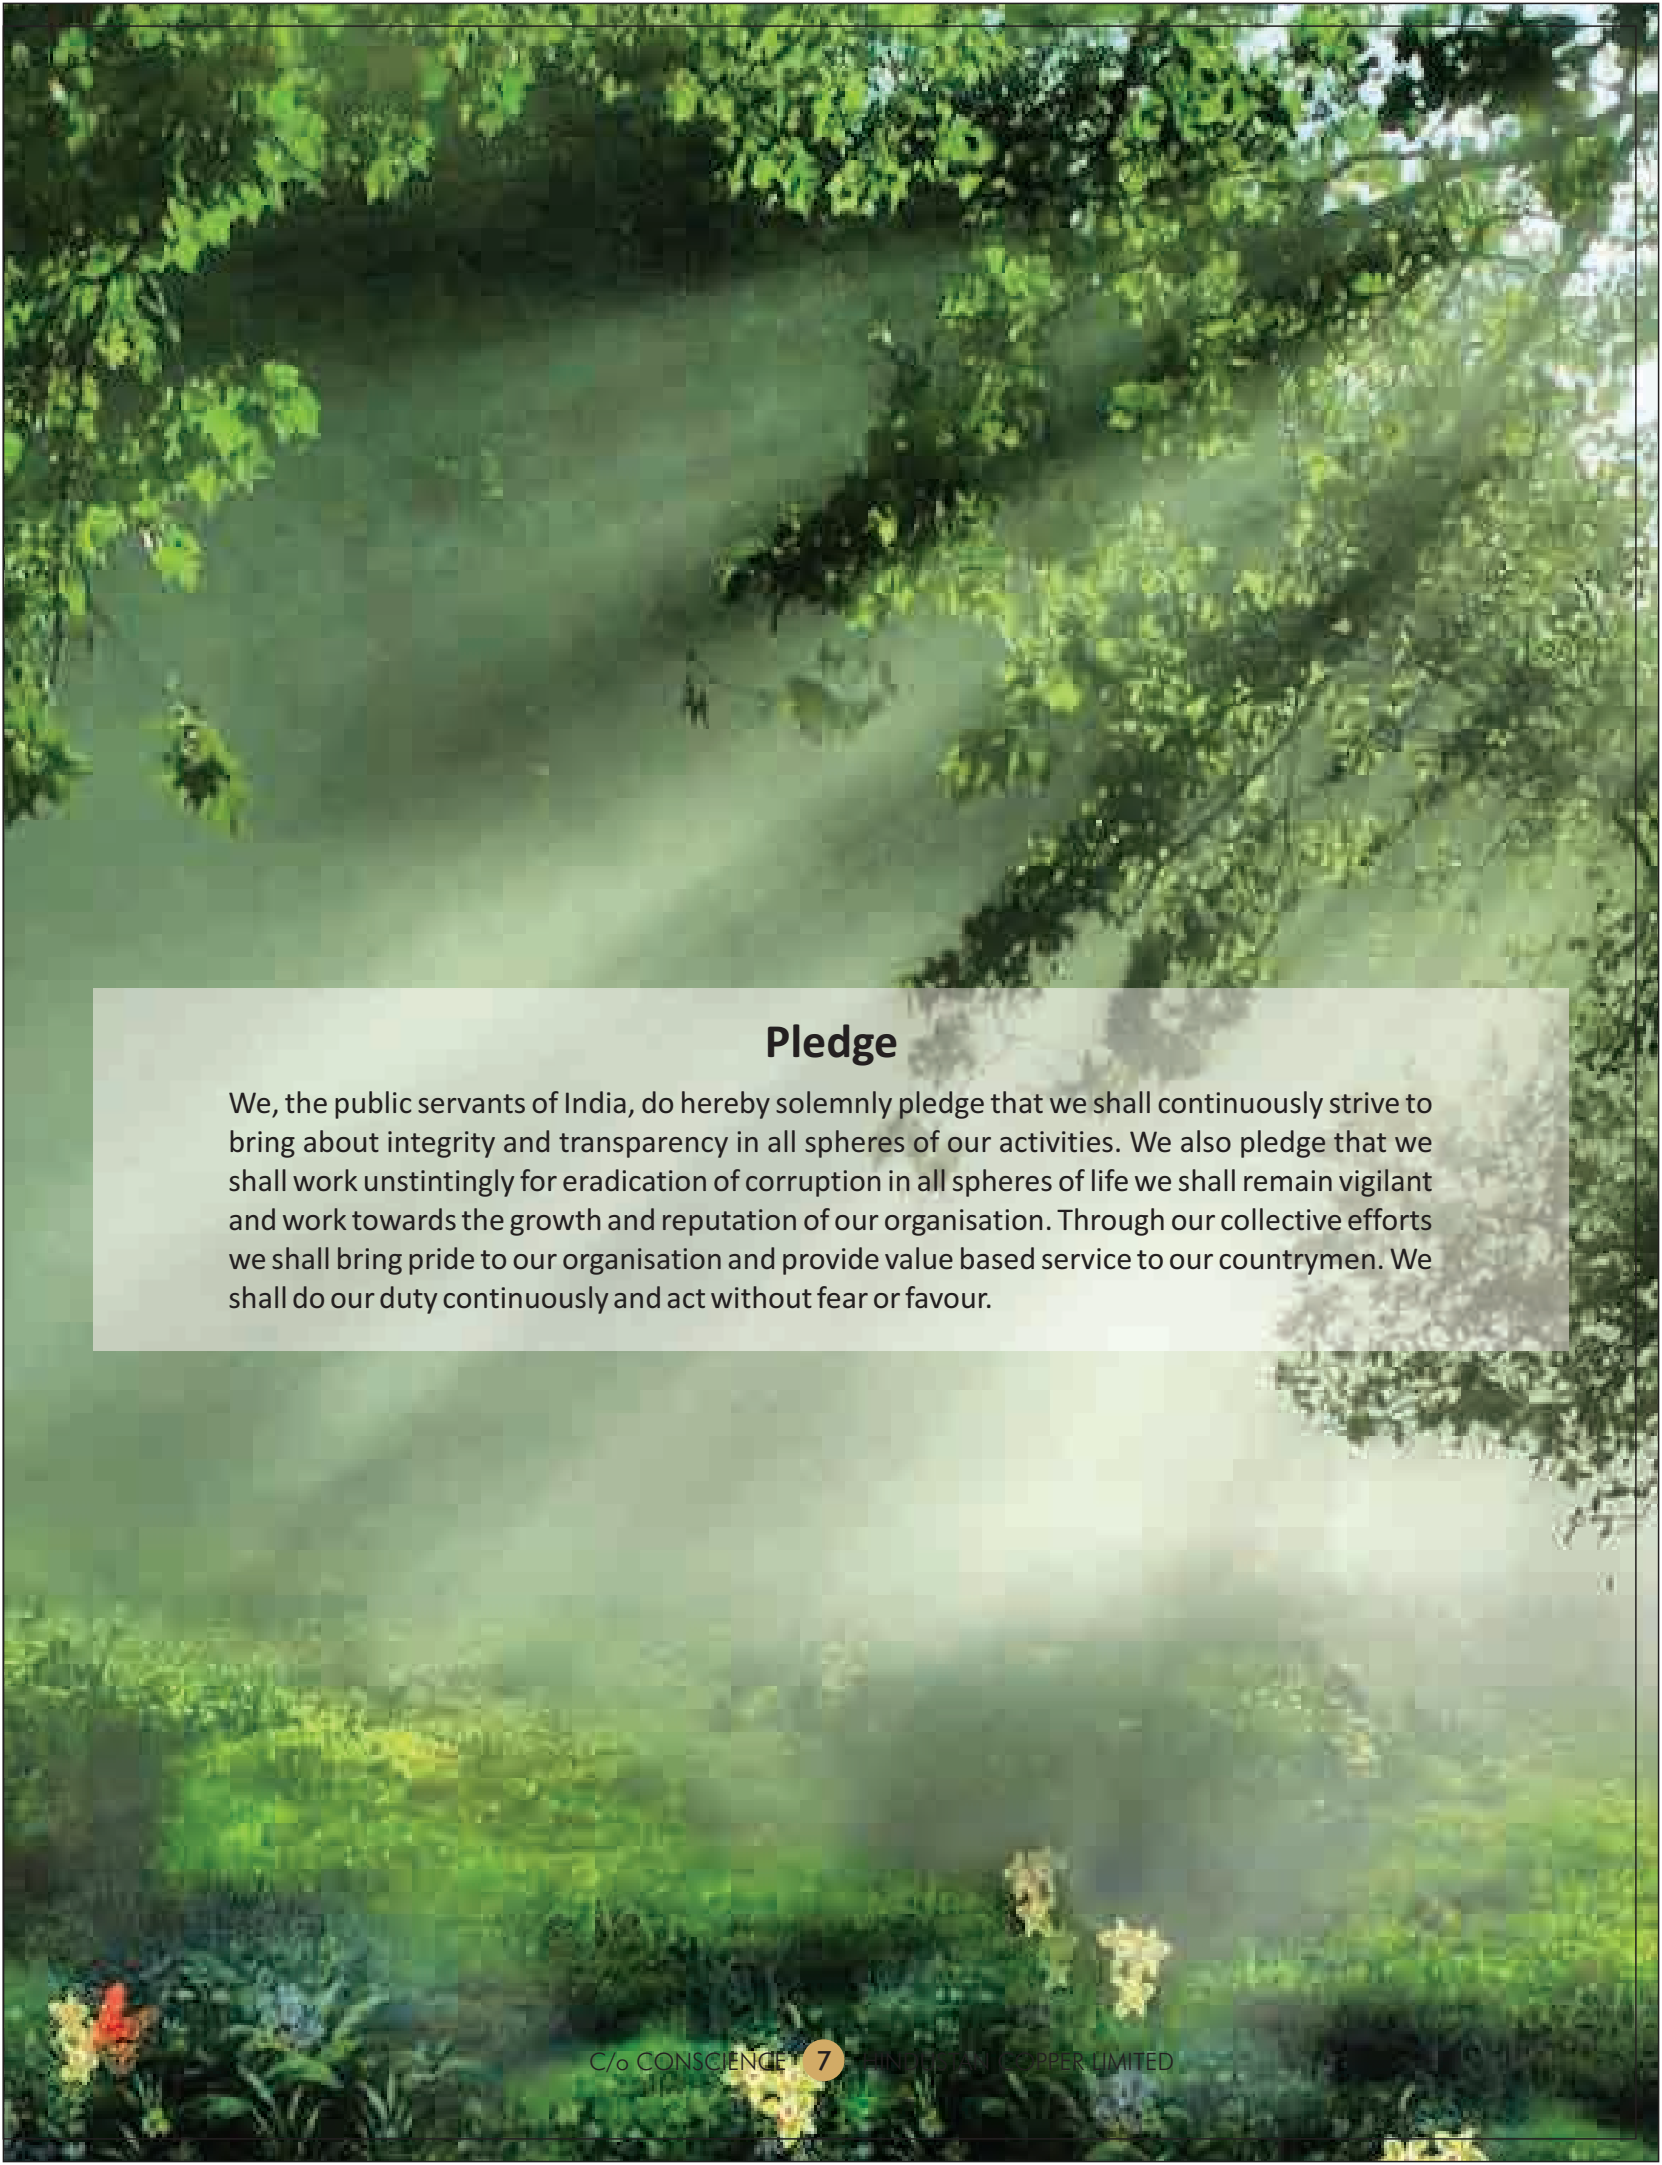

I am glad to know that the Vigilance Awareness Week is being observed from 31st October to 5th November, 2011.

Corruption is a scourge and a matter of prime concern to all. Its eradication is necessary for peace, development and progress.

Let us take a pledge on this occasion to work towards removal of corruption from all spheres of life.

New Delhi
4th October, 2011

M. HAMID ANSARI

Pledge

We, the public servants of India, do hereby solemnly pledge that we shall continuously strive to bring about integrity and transparency in all spheres of our activities. We also pledge that we shall work unstintingly for eradication of corruption in all spheres of life we shall remain vigilant and work towards the growth and reputation of our organisation. Through our collective efforts we shall bring pride to our organisation and provide value based service to our countrymen. We shall do our duty continuously and act without fear or favour.

सं./No.

दिनांक / Dated: 27th October, 2011

Vigilance Awareness Week 31st October to 5th November, 2011.

The objective of Vigilance Awareness Week is to reaffirm our commitment to fight corruption. Steps need to be taken to root out corruption at all levels and from all walks of life.

While reaffirming our commitment to fight corruption during the observance of the Week, we need to enlist the support and participation of all stakeholders and seek their active co-operation in fighting the menace of corruption. It is recognized that corruption is a social evil and in addition to punitive and preventive steps, we need to work together as a team to sensitize and motivate public at large to make an impact in our progress towards zero tolerance for corruption. Systemic improvements need to be brought about to reduce administrative delays, simplify cumbersome rules and procedures, and promote transparency, fairness and equity in governance. The corrupt must be dealt with ruthlessly whereas the honest need to be protected.

The theme chosen by the Commission for this year's Vigilance Awareness Week is 'Participative Vigilance' through active involvement of all stakeholders as the fight against corruption cannot be won in isolation. Let us all take a pledge to unite in the fight against corruption.

Gandhiji said 'You must be the change you wish to see in the world' and let each one of us resolve to be a catalyst in bringing about the change.

Central Vigilance Commissioner

Best Practices - IT Intervention in HCL

Jayanta Mukherjee,
Sr. Manager Marketing and
Core Team Member,
Oracle Apps.ERP, Order
Management Module,
Corporate Office.

Hindustan Copper Limited, a Government of India Enterprise, with multi-location production facilities and a pan-India presence, was established as a Copper Miner to the Nation, way back in 1967. It's a long way up here and the Company has not only survived competition from private players sized ten times more, over last 15 years but also kept itself abreast with the international market conditions, maintaining its strong identity. Crowned with a Miniratna status a few years back, the Company marches ahead like any other Modern Age leaner organizations, where fast and dynamic decision making is the order of the day.

Introducing e-mails and implementing a ERP system that incorporates the Best Practices followed over the world, was the vision of the then CMD, Mr. S. C. Gupta, who left no stone unturned in ensuring its success with his strong support and massive communication plus training initiative, taking IT to the tables of shopfloor users who had never touched a computer (A Case Study on Success of ERP in HCL has also been published on the Oracle website).

With such a scalable system in place as the backbone of the Company, the focus has now shifted on expansion of mining capacities exponentially, moving the Company on a growth path.

HCL is proud of its IT intervention that incorporates Best Industry Practices, which make the decision making and execution process not only fast, accurate and dynamic but also more transparent, responsible and accountable.

ERP as a tool to introduce

Best Practices in organisation functioning:

Administered at three levels in HCL; a System Administrator, a Core User (or corporate User) and Unit (or Office) Users, ERP has resulted into defining processes properly and uniformly, giving exact responsibilities to users with proper password protected access.

Data-in is being processed into data-out with no duplication but just value addition like in Marketing...

what goes in as an Order from customer's web booking into the ERP is processed into Delivery Order, Delivery Challan & Tax Invoice with no alterations in the original order but just information added at each stage.

Standardisation of Codes & Report Formats across Departments, Units & Offices and paperless office is an offshoot of ERP in HCL. Master entry is centralised to avoid duplicacy i.e. one code for same Customer, Supplier, Item, etc across the Company.

The approval hierarchy is also mapped in ERP for faster and transparent flow of proposals.

Further, better reporting using ERP helps in identifying the gaps for process improvements to improve efficiency and reduce costs at various levels of production.

As the system takes care of routine and duplicate work, managers have more time for meeting customers, vendors, bankers etc. and engineers more time for process improvements and R&D.

Access of Centralised Vendor database & Item master to all Materials Department in Corporate Office and Plants, along with past cost / performance records in the system, helps in evaluating Vendor Offers more fruitfully and results into designing of better Tenders for future as well.

Vigilance in HCL, has also been instrumental in identifying from time to time, the gaps in the prevailing data capturing and information viewing capabilities in the system, and suggesting ways for improvements in the checks and balances that can help maintaining absolute transparency.

View of Stock of Spares & Stores to all concerned in Materials Department, helps locating may be utilised by another Unit needing the item urgently instead of procurement action.

While Bill Tracking is also possible in ERP to know the status of Vendor Bills (as well as Employee Bills), Refunds to customers and vendors, is done compulsorily through RTGS by collecting their Bank Mandate on one time basis instead of Cheques. With statutory requirements

gradually going online and time-bound announcement of Audited Financial Results becoming compulsory, ERP has been a boon to HCL.

Corporate Finance has added a feather in the cap of ERP success by successfully generating Final Accounts within 15 days of close of each Quarter as well as Financial Year for last 2 years.

However, in order to maintain the Success of ERP, new users need to be trained (existing users given refreshers), new business requirements constantly mapped and Training manuals need to be

regularly updated.

ERP having stabilised and integrations established in HCL, with no high customisation cost or system dependency as it was during implementation, in order to encourage users to use the system instead of manual record-keeping and reporting which some users still like to do, more User-required Reports are now being designed in ERP.

Best Practices in HCL Marketing :

HCL Marketing, under the guidance of the then CMD, Mr. Shakeel Ahmed, has introduced Best Practices in the Department's functioning by not only leveraging upon the ERP capabilities but also making full use of HCL website.

Customer Interface using ERP :

Customers get instant e-mail of despatch details as soon as material moves out of any HCL Godown.

The Test Certificate is also auto generated at the time of material delivery from the Quality details input into the system at the Production level.

Auto mails of Account statements (which are now online), are sent to customers from ERP.

Customer Interface using Web :

Product Specifications, Addresses of Godown / Plants / Offices, Name, Contact no, e-mail id of contact person & Price Circular are published on HCL website.

Marketing Policy, which otherwise is a trade secret practically in any Commercial Organisation in the world, is published on web for HCL. This includes the pricing options & incentives

along with the detailed terms & conditions of payment & lifting against bookings. With all their cards open, the Marketing Team finds it very difficult to manage adversaries. But despite this, HCL Team is not only maintaining sales, but achieving higher levels.

Unique in Copper Industry and even PSU space,

Customers can Register on HCL website, get a Login ID and Password, just like Yahoo, Gmail, where they can View LME CSP & TT Selling details, Place sales orders at specific pricing option and View status of their orders i.e. quantity and price accepted or reason in case declined. The customers also get an auto confirmation e-mail for the same in their registered mail.

Web-booking has been made compulsory as against Fax or e-mail Bookings accepted earlier. It is worthwhile to mention that big Private Sector behemoths like Hindalco and Sterlite still use the telephone to book orders and their customers do not have an option to book material online as per their need, so transparently. HCL has won several accolades from customers for this unique online system.

Order once submitted by the customer on the web, is not editable or removable.

Material delivery is assured automatically to the customer (with no space for any discretion on any person in HCL) once booking is accepted on web.

Plans are on, to make the Account Statement available online to customers on their respective login IDs on HCL website.

There is also a Customer Feedback option which is directly linked to the mail id of the Corporate Marketing Department.

Management of Customer Orders :

There is a two step hierarchy for Management of Sales Order booking on HCL website. Tender upload, Customer activation, Maintaining log etc is System Administration function while booking acceptance as per policy guidelines, is a Corporate Marketing function. Even viewing of the offers (submitted online by customers) by Corporate Marketing, is only after the expiry of the due date / time.

Development is in process for a third level where Regional Sales Offices shall have access to viewing the orders placed by customers of their region.

Web-Tendering has been introduced to get best market price for Copper Sulphate, Mill Scale, Sulphuric Acid, etc. Customers can view Tendered quantity and Reserve Price for such items and submit offers within valid date/time after which the item gets disabled in the list.

The ability of ERP to handle multiple pricing options simultaneously has been tactfully utilised to beat the competition with innovative marketing strategies even after doing away with discounts.

Online reporting in ERP at Regional execution level as well as Corporate monitoring level, has made it possible to

introduce strategies where timing of booking, payment and lifting is the prime essence. Though HCL Team has to work hard against competitors edge over HCL in allowing various flexibilities, relaxations and exceptions as far as following rules is concerned (which HCL Policy doesn't allow), Sales Targets are still achieved with customers willingly accepting the Rules.

HCL in turn ensures Customer Satisfaction by ensuring that they get their booked material in time with no human intervention.

Demand based Just-In-Time Inventory management is followed very scientifically for Production of CC Rod at TCP Plant as well as Stock Transfer of material from there to Godowns for sale using online ERP information of Inventory, Pending orders at various Godowns and Payment received from customers, that helps in matching supply-demand thereby reducing Inventory Holding Costs in the process as well.

Despatch plans are mailed to all concerned in advance to maintain transparency in material allocation.

Not only ERP and online Web-Booking, HCL-Marketing also has a culture of working on e-mails which makes the decision making all the more fast and transparent with all the concerned getting copies of the mails along with detailed attachments instantly.

Even SMSes are useful tools in HCL Marketing for instant planning, intimations and decisions.

Taking a cue from the HCL Corporate Systems Team that has never allowed downtime in ERP ever since Go-Live in Oct'2008, HCL Marketing has also tried to make the best of ERP by having a 24X7 Help desk (working also from home, beyond office hours or on the move) and Off-site managing i.e. no dependency on one person or one location, so as to always maintain the system

online.

Best Practices - Policy Formulation :

Apart from using IT Intervention, implementing Best Practices in designing of Policies is equally important in an organisation.

Simplifying policies, procedures and guidelines for less chance of manipulation or creating confusion amongst the customers.

Maximising objective policy and procedures leaving minimum or no space for subjective discretion.

Minimising special schemes designed for a particular group or category of customers. If at all required, such groups may be defined very objectively and transparently. Standard tender formats with properly designed scope of work & qualifying criteria, which are hosted on website, ensures absolute transparency and maximum participation.

Recording on Notes, maximum data / assumptions and details of circumstances, that led to a decision being taken, establishes the clean intentions of the policy maker.

Marketing Policy in HCL is fully supported by the ERP System which has the capability,

-To accommodate dynamic policy which can be tightened or relaxed from time to time, based on material availability (supply) and

market conditions (demand).

-To track order booking, lifting and pending details – online and keep an audit trail.

-To analyse the sales patterns at various pricing options, which may be used to design policies to maximise sales, timely, at maximum realisation.

To allow Centralised Masters entry, Order entry and passing of discounts so as to avoid multiple interpretations and accountability. Further, absolute transparency is maintained by publishing the policy on the HCL website.

On a positive perspective, Job Rotations and Transfers (of course supported with due Training and Development), instead of being vigilance compulsions, may be viewed as tools for creating better managers with a broader outlook and wider experience, who can create better policies and strategies and lead the organisation to great heights.

The human touch:

All said and done about how Best Practices can be introduced in an organisation by Systems Intervention, the fact still remains that an organisation is all about people. Bringing about a feeling of belongingness in the employees towards the

organisation, as they have for their families, is the key to encouraging following of Best Practices in any Organisation.

If the Company reciprocates an employee's love for his organisation, then best practices by the very same employee, in the interest of the Company, automatically follows.

What is this Cyber crime?

We read about it in newspapers very often

Sitendu Dash
Senior Manager, Systems,
Corporate Office, HCL

“Any criminal activity that uses a computer either as an instrumentality, target or a means for perpetuating further crimes comes within the ambit of cyber crime.” Or “Unlawful acts wherein the computer is either a tool or target or both”

The computer may be used as a tool in the following kinds of activity- financial crimes, sale of illegal articles, pornography, online gambling, intellectual property crime, e-mail spoofing, forgery, cyber defamation, cyber stalking. The computer may however be target for unlawful acts in the following cases-

unauthorized access to computer/ computer system/ computer networks, theft of information contained in the electronic form, e-mail bombing, data diddling, salami attacks, logic bombs, Trojan attacks, internet time thefts, web jacking, theft of

computer system, physically damaging the computer system.

Distinction Between Conventional and Cyber Crime:

There is apparently no distinction between cyber and conventional crime. However on a deep introspection we may say that there exists a fine line of demarcation between the conventional and cyber crime, which is appreciable. The demarcation lies in the involvement of the medium in cases of cyber crime. The sine qua non for cyber crime is that there should be an involvement, at any stage, of the virtual cyber medium.

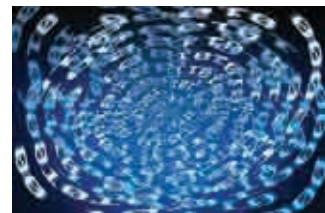

Mode And Manner Of Committing Cyber Crime:

Virus / worm attacks/ Logic bombs/ Trojan attacks:

Viruses are programs that attach themselves to a computer or a file and then circulate themselves to other files and to other computers on a network. They usually affect the data on a computer, either by altering or deleting it. Worms, unlike viruses do not need the host to attach themselves to. They merely make functional copies of themselves and do this repeatedly till they eat up all the available space on a computer's memory.

Logic Bombs are event dependent programs. This implies that these programs are created to do something only when a certain event (known as a trigger event) occurs. E.g. even some viruses may be termed logic bombs because they lie dormant all through the year and become active only on a particular date.

Trojan attacks have its origin in the word 'Trojan horse'. In software field this means an unauthorized programme, which passively gains control over another's system by representing itself as an authorised programme. The most common form of installing a Trojan is through e-mail. E.g. a Trojan was installed in the computer of a lady film director in the U.S. while chatting. The cyber criminal through the web cam installed in the computer obtained her nude photographs. He further harassed this lady.

Spam/ e-mail bombing:

Spam, or the unsolicited sending of bulk e-mail for commercial purposes to the victim, which may be an individual or a company or even mail servers, thereby ultimately resulting into crashing, is unlawful in some jurisdictions. While anti-spam laws are relatively new, limits on unsolicited electronic communications have existed for some time.

Fraud / Hacking:

Computer fraud is any dishonest misrepresentation of fact intended to let another to do or refrain from doing something which causes loss. In this context, the fraud will result in obtaining a benefit by:

- Altering computer input in an unauthorized way. This requires little technical expertise and is not an uncommon form of theft by employees altering the data before entry or entering false data, or by entering unauthorized instructions or using unauthorized processes;

- Altering, destroying, suppressing, or stealing output, usually to conceal unauthorized transactions: this is difficult to detect;
- Altering or deleting stored data;
- Altering or misusing existing system tools or software packages, or altering or writing code for fraudulent purposes.
- Altering raw data just before a computer processes it and then changing it back after the processing is completed.
- The computer of the victim is flooded with more requests than it can handle which cause it to crash. Distributed Denial of Service (DDoS) attack is also a type of denial of service attack, in which the offenders are large in number and widespread
- Other forms of fraud may be facilitated using computer systems, including bank fraud, identity theft, extortion, and theft of classified information.

A variety of Internet scams target consumers directly.

Web Hacking / Jacking:

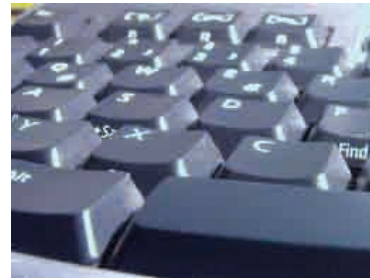

This term is derived from the term hijacking. In these kinds of offences the hacker gains access and control over the website of another. He may even mutilate or change the information on the site. This may be done for fulfilling political objectives or for money. E.g. recently the site of MIT (Ministry of Information Technology) was hacked by the Pakistani hackers and some obscene matter was placed therein. Further the site of Bombay crime branch was also webjacked. Thus webjacking is a process where by control over the site of another is made backed by some consideration for it.

Internet time thefts:

Normally in these kinds of thefts the Internet surfing hours of the victim are used up by another person. This is done by gaining access to the login ID and the password. This was perhaps one of the first reported cases related to cyber crime in India. However this case made the police infamous as to their lack of understanding of the nature of cyber crime.

Obscene or offensive content:

The content of websites and other electronic communications may be distasteful, obscene or offensive for a variety of reasons. In some instances these communications may be illegal.

Over 25 jurisdictions place limits on certain speech and ban racist, blasphemous, politically subversive, libelous or slanderous, seditious, or inflammatory material that tends to incite hate crimes.

The extent to which these communications are unlawful varies greatly between countries, and even within nations. It is a sensitive area in which the courts can become involved in arbitrating between groups with strong beliefs.

One area of Internet pornography that has been the target of the strongest efforts at curtailment is child pornography.

Harassment:

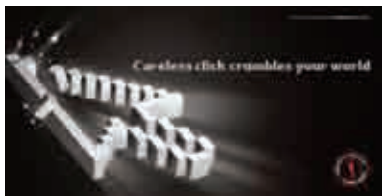

Whereas content may be offensive in a non-specific way, harassment directs obscenities and derogatory comments at specific individuals focusing for example on gender, race, religion, nationality, sexual orientation. This often occurs in chatrooms, through newsgroups, and by sending hate e-mail to interested parties (see cyber bullying, cyber stalking, harassment by computer, hate crime, on-line predator, and stalking). Any comment that may be found derogatory or offensive is considered harassment.

Drug trafficking:

Drug traffickers are increasingly taking advantage of the Internet to sell their illegal substances through encrypted e-mail and other Internet Technology. Some drug traffickers arrange deals at internet cafes, use courier websites to track illegal packages of pills, and swap recipes for amphetamines in restricted-access chat rooms.

The rise in Internet drug trades could also be attributed to the lack of face-to-face communication. These virtual exchanges allow more intimidated individuals to more comfortably purchase illegal drugs. The sketchy effects that are often associated with drug trades are severely minimized and the filtering process that comes with physical interaction fades away.

Cyber terrorism:

Government officials and Information Technology security specialists have documented a significant increase in

internet problems and server scans since early 2001. But there is a growing concern among federal officials that such intrusions are part of an organized effort by cyber terrorists, foreign intelligence services, or other groups to map potential security holes in critical systems. A cyber terrorist is someone who intimidates or coerces a government or organization to advance his or her political or social objectives by launching computer-based attack against computers, network, and the information stored on them.

Cyber terrorism in general, can be defined as an act of terrorism committed through the use of cyberspace or computer resources (Parker 1983). As such, a simple propaganda in the Internet, that there will be bomb attacks during the holidays can be considered cyber terrorism. As well there are also hacking activities directed towards individuals, families, organized by groups within networks, tending to cause fear among people, demonstrate power, collecting information relevant for ruining peoples' lives, robberies, blackmailing etc.

Cyber extortion is a form of cyber terrorism in which a website, e-mail server, or computer system is subjected to repeated denial of service or other attacks by malicious hackers, who demand money in return for promising to stop the attacks. According to the

Federal Bureau of Investigation, cyber extortionists are increasingly attacking corporate websites and networks, crippling their ability to operate and demanding payments to restore their service. More than 20 cases are reported each month to the FBI and many go unreported in order to keep the victim's name out of the domain. Perpetrators typically use a distributed denial-of-service attack.

Cyber warfare:

Sailors analyze, detect and defensively respond to unauthorized activity within U.S. Navy information systems and computer networks

Cyber crimes can be basically divided into 3 major categories:

1. Cyber crimes against persons.
2. Cyber crimes against property.
3. Cyber crimes against government.

Cyber crimes against persons: Cyber crimes committed against persons include various crimes like transmission of child-pornography, harassment of any one with the use of a computer such as e-mail. The trafficking, distribution, posting, and dissemination of obscene material including pornography and indecent exposure, constitutes one of the most important Cyber crimes known today. The potential harm of such a crime to humanity can hardly be amplified. This is one Cyber crime which threatens to undermine the growth of

the younger generation as also leave irreparable scars and injury on the younger generation, if not controlled.

Cyber harassment is a distinct Cyber crime. Various kinds of harassment can and do occur in cyberspace, or through the use of cyberspace. Harassment can be sexual, racial, religious, or other. Persons perpetuating such harassment are also guilty of Cyber crimes. Cyber harassment as a crime also brings us to another related area of violation of privacy of citizens. Violation of privacy of online citizens is a Cyber crime of a grave nature. No one likes any other person invading the invaluable and extremely touchy area of his or her own privacy which the medium of internet grants to the citizen.

Cyber crimes against property: The second category of Cyber crimes is that of Cyber crimes against all forms of property. These crimes include computer vandalism (destruction of others' property), transmission of harmful programme.

Cyber crimes against government: The third category of Cyber crimes relate to Cyber crimes against Government. Cyber terrorism is one distinct kind of crime in this category. The growth of internet has shown that the medium of Cyberspace is being used by individuals and groups to threaten the international governments as also to terrorise the citizens of a country. This crime manifests itself into terrorism when an individual "cracks" into a government or military maintained website.

Coupled with this the actuality is that no computer system in the world is cracking proof. It is unanimously agreed that any and every system in the world can be cracked. The recent denial of service attacks seen over the popular commercial sites like eBay, Yahoo, Amazon and others are a new category of Cyber crimes which are slowly emerging as being extremely dangerous.

Good procurement practices by Hindustan Copper Limited

Shri A.K. Dasgupta
General Manager
(Corporate Planning)

Some of the good practices being adopted by HCL in the area of procurement are enumerated below:

1. Introduction of Enterprise Procurement System (EPS) in the year 2008 to enable the suppliers to participate in purchase tenders and bid online. Introduction of E-Procurement has given the following benefits to the Company. It has -
 - i) Encompassed all stakeholders - buyers, suppliers, auditors and decision makers in a transparent, collaborative and fair practice environment.
 - ii) Maximized Company's savings potential by way of optimizing supplier selection and bringing efficiency improvements in the administrative processes of preparing tenders and requesting supplier quotations.
 - iii) Shortened the procurement cycle, allowing the users to allocate resources and time for other critical issues.
 - iv) Automated the entire tendering lifecycle for procurement of goods and services starting from creation of a purchase enquiry through to the award of contract with strict control.
 - v) Provided single point access for both vendors and purchasers to do business efficiently in a convenient and user-friendly manner.
 - vi) In addition to webhosting and proper advertisement, the tenders are also hosted in public portals like www.tender.gov.in as well as in CPP portal.

2. Introduction of E-payment system in the year 2008 making it mandatory to make payment electronically to the bank account of the payee without physical transfer of money or issuing instrument of money like Cheque or DD.

This is also in line with the directive from Central Vigilance Commission regarding switching over to E-payments to have transparency in payments to vendors and shorten the time involved in the payment process.

3. Publication of Purchase/Works Contract tender enquiries valuing Rs. 2.0 Lakh & above on its website from the year 2007 moving a step towards enhancing e-governance and transparency. The tender documents uploaded on the Company's website invariably contain detailed scope of work, product specification in an unambiguous terms, pre-qualification criterion of the vendors etc.
4. Centralization of procurement of high value items including raw materials as well as common stores & spares required by its production units. The

centralized procurement of such items from the corporate office was formalized in the year 2006, which has resulted in following advantages:

- i) Strengthening of the bargaining position of the Company through bulk buying and taking the advantage of quantity discount
- ii) Standardization of products across the Units
- iii) Reduction in the cost of order processing such as order placing, receiving, inspection, accounts

- etc. substantially due to placement of lesser number of orders for large quantities
- iv) Minimizing duplication of common activities across the Units
- v) Ensuring fair and equitable treatment to all vendors
- vi) Open Tenders are the norm while the Limited Tender Enquiries and Single Tender Enquiries are the exception, which are normally restricted for OEMs
- vii) All items above the threshold value are mandatorily procured through e-tendering via the platform of service provider M/s Metal Junction.

5. Signing of Annual Rate Contracts (ARCs) with OEMs for supply of various shortlisted equipment/machinery spares to the units as per requirement on phased delivery basis. This has ensured minimum inventory holding of the spares at the units besides reduction in the ordering cost.
6. For critical/complex requirements, pre-bid discussions are held with the interested vendors. Information on pre-bid discussions is also given via web hosting as well as newspaper advertisement.
7. Entering into long term supply contracts with PSUs for supply of high value consumable items like, FO, LDO, HSD, LPG, Naptha, Lubricants, explosives etc. to the units as per delivery schedule. This has resulted in effecting substantial cost savings to the Company by consolidating purchases through volume discounts.
8. Successful implementation of Materials Module of Oracle ERP in the year 2008 has enabled HCL to adopt a centralized business management platform, unifying the Company, thereby strengthening its supply chain management and spares control. The legacy system earlier being followed in the functioning of purchase activities has been stopped with the implementation of ERP.
9. HCL signed MOU with Transparency International India (TII) in September, 2008 for adoption of Integrity Pact. The Pact essentially envisages an

agreement between the prospective vendors/bidders and the buyer committing the persons/officials of both the parties, not to exercise any corrupt influence on any aspect of the contract. The Pact entitles only those vendors/bidders who have entered into such an Integrity Pact with the buyer, competent to participate in the bidding.

CVC has approved a panel of two IEMs for HCL, to review independently and objectively, whether and to what extent parties have complied with their obligation under the Pact.

10. Online vendor registration introduced through a link on the Company's website has enabled the vendors across the country to register their firms with HCL for supply of stores & spares.
11. Updating Company's purchase manual through West Bengal Productivity Council, laying down procedures and guidelines for procurement of materials as well as streamlining the procurement activities across all Units of the Company.
12. Review and revision of delegation of powers of the Unit heads periodically, as per requirement, in respect of purchase of stores and spares.
13. The Company has implemented CVC directive to post a summary every month containing the relevant details of all contracts/ purchases made above a threshold value on its website.
14. Introduction of multimodal logistics system in the year 2008 for Inter-Unit containerized movement of concentrate. The Company has derived the following benefits by outsourcing the entire end to end logistics services:
 - i) The more efficient and professionally managed complete logistics solution.
 - ii) Avoidance of loss, theft and pilferage in transit (zero loss)
15. Appointed MSTC Ltd. (PSU) to provide services for sale of scrap, obsolete & non-moving items generated at the units through e-auction.
16. Ensuring strict compliance of CVC and Govt. Guidelines issued from time to time in respect of Purchase and Works Contract functions of the PSUs.

Corruption Vs. Convenience

Dr. A. B. Pal
DGM (Vigilance), Corporate Office

The milkman comes to deliver the milk pouches, the gas-van to deliver gas cylinders, for a new telephone connection, the employees from the telephone department come to our house, policemen come for verification of passport, traffic cops ask for the car's papers or the driving license or the pollution certificate – all of them expect some extra money from us to fill their pockets in lieu of their services.

Many people call it a service charge or convenience charge which they are not entitled to. Waiters at the hotels and restaurants expect some tips for their services.

This habit of earning extra money leads to corruption. We pay them either on grounds of sympathy owing to their poverty, or for our own convenience or fear of disruption of regular services without any loss of time. We do not get license from the issuing authority easily and are bound to go through the touts to save our time by paying handsomely extra.

All these habits of both paying and getting extra encourage one to adopt corrupt practices. Now even beggars expect currency notes in alms rather than coins.

This payment of extra money for various services encouraged people to adopt various corrupt practices and at later stage the person becomes corrupt. Corrupt money is always spent lavishly and extravagantly and makes one powerful.

One who earns money by corrupt means, lose their money either through medical bills or through overspending by family members.

Simple and honest living brings peace of mind and ultimately gains in life. Yogis says that “what you earned by honest means are not for spending for yourself only, but, to be shared one-fourth each amongst the poor, elderly parents, family members and for old age.

For simple living we do not need excess money. Today's society of nuclear families with support from the government does not really need one to be corrupt for modest leaving.

Excess money is always misused, increases rivalry, takes away peace of mind, spoils our children and family relation. Do we want that?

My days at Malanjkhanda Copper Project

Shri I.N. Banerjee
is a BE (Civil), FIE, FIV,
Chartered Engineer,
Consulting Engineer,
Valuer and retired
General Manager
(Projects), HCL

It was a chilly early morning in December 1977 when the train pulled up at the Gondia Railway Station.

I arrived with my wife and two kids to join Malanjkhanda Copper Project, and also, the Copper family, as the Superintending Engineer (Civil) and Head of Civil Department. We were received by Dr Gadgay, Geologist, at the Gondia Station with a matador van to escort us to Malanjkhanda.

I do not recall anything worthwhile about the journey from Gondia to Balaghat other than the discomfort factor of the vehicle. Our vehicle stopped for some work at Balaghat.

Waiting at Balaghat continued for hours, time was hanging heavy, I started to lose patience and it was straining on my nerves. I was very keen to reach Malanjkhanda at the earliest to become part of the prestigious national project of Copper mining which has the richest and largest copper deposit in the country. But it appeared to me that my escort was not in a mood to oblige me, let alone appreciate my anxiety. He was busy in making all kinds of purchases.

Bad time is followed by good time and it rang true for me as well. We finally started towards Malanjkhanda. I was later told that nothing was available in and around Malanjkhanda and whenever any vehicle went to Balaghat, it always went with a long list of essential items

to be purchased from there. I felt sorry for having misunderstood Dr. Gadgay who, later on, turned out to be an extremely cooperative, devoted and hardworking person.

As we moved towards Malanjkhanda, I saw the skyline changing. Gradually we entered in the deep forest through the narrow hill road with sharp bends and steep slopes to negotiate. On one side there was a deep gorge and on the other side were the steep hills. It was absolutely still. My heart was full of joy to be in the midst of such a picturesque place, where nature bestowed her gifts in abundance. "If there is a heaven on earth, it is here, it is here, it is here" was the exact feeling I shared with my wife.

Our journey ended in a valley where our camp was located. It was surrounded by hills full of tall and lush green trees. I had never thought of living in such an abode of peace before.

Our geologists and surveyors were the first to start the camp at Malanjkhanda about ten years before. They had already constructed a barrack of ten single units with brick walls, tiled roofs, cement flooring, complete with false ceiling, electricity and water supply lines and fittings including sewer disposal system. Each unit was self-sufficient with a bedroom, toilet, covered space for kitchen and drawing room. The arrangement was good and accommodation was comfortable for a small family.

Apart from the engineers of MEC and HSCL, the following HCL officers were staying with their families in the barracks.

1. Shri A.R. Kohli, Chief Project Manager
2. Shri Y. Subramanian, Geologist
3. Dr M. Bhargava, Geologist
4. Dr V. Gadgay, Geologist
5. Shri U.N. Jhingran, Geologist

6. Shri P.P. Maini, Draughtsman
7. Shri J.P. Dhawan, Surveyor
8. Shri H.L. Gupta, Surveyor
9. Shri J. Arora, Surveyor

Over and above their normal duties, they had been assigned various other jobs as per the project requirement, which were as under:

Shri Y. Subramanian was looking after administration, accounts and liaising with government departments.

Shri U.N. Jhingran was in-charge of stores, purchases and also the electrical jobs.

Dr Gadgay was handling the responsibility of identification of tubewell sites, sinking of tubewells and making temporary arrangement for supply of water to the barracks, office and other establishments. The water supply was augmented by pumping water from Karamsara irrigation tank till the permanent water supply scheme was implemented. Karamsara was a beautiful tank full of fish and had crystal clear water.

Shri J.P. Dhawan and Shri P.P. Maini were looking after all the construction jobs.

Having come from the private sector, I was not conversant with the culture of moving note sheets for approvals so typical of the government departments, and I picked it up from Shri Dhawan.

Our survey boys were sent out to buy vegetables and fish for all the camp dwellers from the weekly markets in Birsa and Mohgaon, both about 3 kms away from our camp. MCP had made arrangements with Dr Jain, a child specialist for him to visit the camp each Friday. Arrangement was also made with the Bhilai Hospital for treatment of our patients.

There were no specific office timings. Everybody worked from morning through evening.

We used to remain cut off from the rest of the world for days together during heavy rains as the seasonal rivers flooded the roads connecting Malanjkhand. As

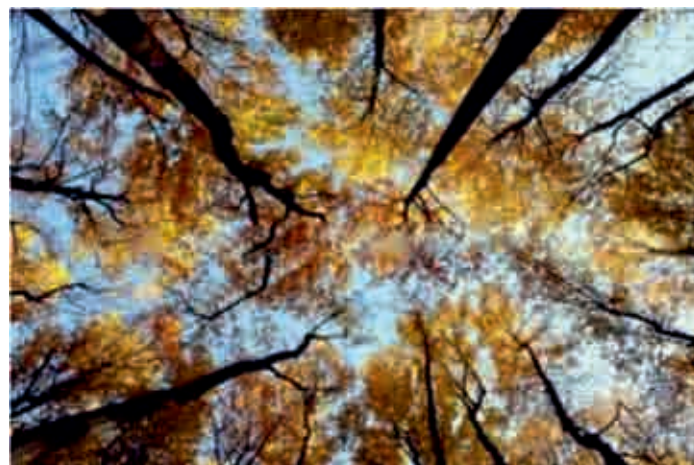

enthusiasm brings new life into old task and fills dull situations with joy, we were very happy with the job we were doing. All the hardships we had faced made us stronger to meet bigger challenges in the coming days.

Government sanction for the project was getting delayed; The then CMD gave a go-ahead to start all the essential jobs including construction of 144 quarters, a school building suitable for CBSE curricula, a guest house, township drinking water reservoir on Chartola hill and temporary moorum roads. Everything was to be constructed as per the masterplan and the Detail Project Report.

Construction of Barkhera dam supplying 5 MGD water to MCP was started with funds equally shared by the Central Government, M.P. State Government and HCL. Work on Haul road construction was started by engaging over 3000 labourers per day prior to the arrival of the equipments.

The much awaited Government clearance was received in 1978 and work started in full swing in the mining and the plant area, tailing disposal, township and infrastructure sectors with tremendous enthusiasm. At the same time the social calendar used to be chock-a-block with film shows, dinner parties, children's cultural programs, musical programs and other social activities. Not a single day went in waste.

Hindustan Steelworks Construction Limited (HSCL) was initially our turnkey contractor for the township. But to expedite the construction of the township with all its civic amenities viz. Shopping Centres, Community Centre, Chartola Club, Nursery School, Police Barracks, Roads etc., other private contractors were also brought in. There was healthy competition among them which benefitted the project. There was no provision in the contract with HSCL for construction of any Directors' Bungalow which they did without any additional cost to HCL. The design of the VIP Guest House with the Chartola Club was a gift from Engineers India Limited (EIL). EIL also prepared the design of the ground water storage tank free of cost. This tank, located near the E.D. Bungalow, had the facility of a mini swimming pool as the Bureau of Public

Enterprises did not permit construction of a swimming pool.

EIL was the main designer for all the buildings and structures in the plant area, including the Tailing Disposal System and Services to Mining. Construction of all these buildings and facilities were done by HSCL and other reputed contractors. Turnkey contractors for the Concentrator Plant and Water Treatment Plant were McNally Bharat and Geo Miller respectively. Raw water and treated water pipelines were laid by Shapoorji Pallonji & Co. Ltd.

Domestic and Industrial Effluent Treatment Plant was constructed, as per EIL's design, with a fish pond and surrounding the area with greenery to make it eco-friendly.

During those days, there were no concrete batching plants, transit mixers or ready mix concrete. All concrete works were done with nominal mix in mixer machine fitted with hoppers. The largest single-pour concreting was done in Primary Crusher foundation where about eight large mixer machines worked continuously for 36 hours to complete the work. The entire site was flooded with lights at night. To break the monotony of work and also to bring in a mood of celebration, music was played on loudspeakers.

There was acute shortage of steel and cement in the market. On many occasions I had to accompany our Materials Officer to Bhilai Steel Plant and A.C.C. Cement Factory for inclusion of our requirements in their production schedule. As the priorities were fixed for defence and government projects including railways, they had hardly any scope to cater to our requirements. However, they appreciated our problem and tried their best to help us. Even then there were disruptions in our supply line which affected the progress.

Communication was a serious problem. Let alone STD calls, even local calls were impossible. Telephone lines remained out of order perennially. Postal delays were unbelievable. Courier services or e-mail facilities were not available. We got ultimately connected to H.O. through the wireless service.

Laying of pipelines for tailing disposal system through the forest and construction of the tailing dam in the deep forest area were no mean tasks. Wild animals used to create trouble for us. We could not answer their innocent question, "What wrong have we done to you that you are displacing us from our own land where we have been living peacefully from the times immemorial?"

The tailing disposal system including the tailing dam was designed by EIL with Watermare (Knight Piesold) from U.K. as their backup consultant. The mining industry the world over has an unhappy record of tailing dam failures. In many cases as in USA, South America, Wales, Zambia etc., the failures have been catastrophic, the reason being the fluidity of tailings which is one of the most dangerous phenomena in soil mechanics.

Conventionally, tailings are deposited within a valley, created by developing an earthen dam all around. For construction of the earthen dam, apart from the prohibitive cost, huge land and fill materials are required which are generally not available near the project site.

To avoid this problem, the technology adopted at MCP is self rising of the dam height (over a small earthen starter dam), by the deposition of coarser tailing particles separated from the finer ones through hydro-cyclones. Although theoretically, it is a good technology but due to various operational issues, it became difficult to exactly implement the design concept, resulting in serious problems.

At a later date, EIL wanted to adopt thickened slurry disposal scheme designed by Dr Robinsky of Canada. Even after attending their presentation at Delhi, I could not agree to it as I thought that uninterrupted control of pulp density (65%) may not be achievable at the site. Also

rain and storm may affect the stability of the deposited cones of tailings.

Considering all the problems of depending on a foreign consultant, I contacted the Chief Engineer, Central Water Commission, for their technical guidance. After initial reluctance, CWC came to our rescue. The dam which had developed branches at some places was repaired as per CWC's design. I hope we are still working under the guidance of CWC for the safety of the dam which was the second highest tailing dam in the country after Vizag.

All the above mentioned contracts were finalized through different packages prepared by EIL. Before their approval by HCL, every package had been discussed with EIL down to the minutest detail, followed by even heated arguments. On many occasions, these meetings held at MCP dragged on well into midnights, when we had to get ready to leave the camp by 4 am, only to take a flight to Delhi from Nagpur for the next meeting with EIL. Having returned to Nagpur by the evening flight, we never halted there for the night. Instead, we headed straight for Malanjkhanda and reach there by early morning the following day.

Austerity was rated high in our priority list. One example will suffice. In a late night journey to Nagpur, as mentioned above, apart from J. D. Taneja, Project Head, his wife and daughter, myself, Shri Govekar, Chief Architect of HSCL and his colleague, an engineer, we all travelled together in one Ambassador!!

RTZ was our mining consultant. They had only one representative posted at MCP for planning, designing, supervision, troubleshooting and all other related jobs of the project. He could be spotted anytime in the day, roaming the hills all by himself, with a notebook, pencil and a map.

At a much later date, a viewpoint with a helipad was developed where Mrs. Indira Gandhi landed for inauguration and dedication of the plant to the nation.

The journey to the goal was not a cakewalk at all. It was a journey through the woods on a dark night. But we always saw light at the end of the tunnel.

The project was completed in record time....six months ahead of the completion schedule. MCP had demonstrated that even after complying with all government norms, rules and regulations, which are generally considered as hindrances to speedy implementation of a project, a project could be completed even before the schedule time with pure dedication, hard work and the zeal to achieve. Everybody in the project was honoured with cash award which was a remarkable thing in a Government of India project.

I wish to mention few points before I close my memoir:

- After the project was approved by the government, Engineers India Limited (EIL) was commissioned for

project consultancy, monitoring and supervision work. The question I had in my mind was that when EIL would do everything, what would be my role as the head of the Civil Department? Our CMD replied that I would supervise EIL's job. I was given a more difficult job to accomplish than I had imagined.

- A live graveyard with coffins was dug out and the adjacent Church was relocated beyond the blasting zone for uninterrupted service. Possibly, it was yet another unique feature of the project.
- The Turbo generator was supplied by a Japanese company who had specified that the amplitude of vibration of the T.G foundation should not exceed 25 microns as compared to 35 microns as per the Indian standard. After a lot of correspondence and a visit to Japan by EIL engineers, EIL advised HCL to provide a flexible sub-base below the Reinforced Cement Concrete foundation to dampen the vibration. The foundation was made accordingly. After installation and trial run of the T.G., I asked the Japanese expert who had commissioned it, what was the amplitude of vibration he was actually getting? He had no answer as he did not have any instrument to measure nor was he aware of any such restrictions.
- People from different parts of the country with different religious faiths came to Malanjkhanda for a common cause. Malanjkhanda provided land to each community, free of cost, to build their respective places of worship and thus ensured total communal harmony and peace.
- The saga of Malanjkhanda never ends....

TAILPIECE

As I go down and down the depth of my thoughts, I realize that time has taken its toll. So I leave it to my August readers to accept or reject my story.

Combating Corruption in The Corporate Sector

Ms. Godhuli Mukherjee

Director, Planning Commission,
Government of India

Honorable Justice A.K. Ganguly observed in January, 2012 in connection with the 2G case, “Today, corruption in our country not only poses a grave danger to the concept of constitutional governance, it also threatens the very foundation of Indian democracy and the rule of law. The magnitude of corruption in our public life is incompatible with the concept of the socialist, secular democratic republic. It cannot be disputed that “where corruption begins, all rights end”.

There is no denying the fact that there exists widespread corruption in India despite the existence of a relatively strong governance structure, institutions, legal framework and policies. The anti-corruption laws and institutions coupled with a strong overseeing

system consisting of the CVC, CAG and the CIC have been well acknowledged. The problem lies in implementation and it needs to be acknowledged that there is a huge gap between the policies and practice.

Corruption can come in various forms and in a wide array of illicit behavior, and also manifests itself in different sections of the society. **This paper concentrates on fighting corruption in business organizations, dealings and practices.**

From the law-enforcement point of view, the simplest and the most obvious anti-corruption effort would be to **ensure strict enforcement of anti-corruption laws** and punishing the corrupt. This is expected to have serious deterrent effect on spreading of corruption. But the shortcoming of this approach lies in the cumbersome process involved in punishing the errant and often the deterrent effect is lost due to delay and dilution of punishment.

It is well acknowledged that preventive strategies coupled with awareness programs, rather than punitive measures

are more effective in tackling corruption. One of the preventive strategies that have been successful in combating corruption is the adoption and the leveraging of technology, by persuading organizations to **adopt IT**

and automate the activities and processes which would bring about transparency in business dealings. This needs to be emphasized and popularized.

Facilitating mechanisms like easy accessibility, transparent availability of information, etc, also act as effective preventive mechanisms. Right To Information act has been an important measure in empowering citizens as well as the business community in their fight against corruption. “Anti Bribery Hot Lines” should be available to the citizens so that they can report solicitation of bribes which should then be followed by prompt action.

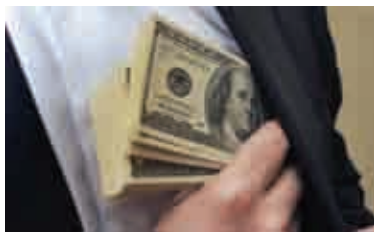

These are some roles that the Government is expected to play to encourage healthy business practices. But what is equally important, is that the **business community itself needs to play a proactive role** in this battle. There are various methods of doing so which have been successfully deployed in various parts of the world. Some such approaches have been discussed below.

Often in discussions about compliance, the phrase **“Setting the Tone from the Top”** is used. What does it actually mean for the business leaders? Showing by example is part of it, but surely that is not enough. For the ‘tone’ to percolate down the line, comprehensive and simultaneous steps need to be taken to bring and educate people down the line about the need to follow these examples. The entire package of ethical, moral and performance related requirements which encapsulate the entire gamut of corruption need to be communicated not just through examples but by directly educating all

involved stakeholders. It is also important to be personally committed to spreading the word not only beyond the immediate confines, but to society as a whole.

The new concept today is that of **“collective action”**- a technique to tackle business related corruption. Collective Action is a collaborative and sustained process

of cooperation between stakeholders. It Increases the impact and credibility of individual action; Brings vulnerable individual players into an alliance of like-minded organizations; Levels the

playing field among competitors; and May, to some extent, complement and strengthen, laws and anti-corruption practices. Collective Action is a proven method of fighting corruption. Mexico, Indonesia, Ecuador and Germany (among many others) are locations where business and other stakeholders presently use various forms of collective action.

However, Collective Action is not quick or easy. It requires patience, hard work and expertise. The first step is to create a set-up that can act as a neutral facilitator. The elaborate process of setting up industry specific 'Collective action systems' is beyond the scope of this article. What needs to be highlighted however is that, there exists, prima-facie, a considerable scope of looking at and handling business related corruption in India through a more proactive role of industry specific associations and organizations. These associations can integrate moral and ethical business codes of practice in their objectives and guidelines which are to be adhered to by the respective members.

Let us take the example of the Indian Pharmaceutical industry. The Organization of Pharmaceutical Producers of India (OPPI) established in 1965 is a premier association

of pharmaceutical companies in India. This Organization is the member of the IFPMA (The International Federation of Pharmaceutical Manufacturers & Associations, which is a global, non-profit, non-governmental organization representing the pharmaceutical industry. One of the guiding principles of IFPMA is to promote and support principles of ethical conduct and practices voluntarily agreed upon, as exemplified by the IFPMA Code of Practice. OPPI is a signatory to the Code and hence it is obligatory on the Member Companies to adhere to the principles enshrined in this code.

Similar Associations exist in many other sectors in India and it is imperative that they all take proactive steps towards ensuring strong business ethics among the member companies through 'Collective Action'.

Once again, the problem however, is to see that the member companies adhere to these rules and guidelines. It is necessary to ensure that following the rules does not merely remain a box-ticking exercise. The introduction of the OPPI codes ends with a very important statement: The final responsibility of implementation of the Code is a matter of self-regulation and self-discipline.

The other approach is that of creating “**islands of integrity**”. For example, a particular company or a person, not necessarily the top leader, sets an example of integrity by following incorrupt practices. If large number of such cases starts appearing in a system, eventually, it will reach the critical 'tipping point' and there will be a paradigm shift in the attitude towards corruption. But once again, the problem is to ensure creation of enough “islands of integrity” for them to collectively act as a tipping point. After all, individual actions of integrity are often at a disadvantage in a country with rampant corruption. For example take the case of a law abiding firm that follows all the labor laws. Is it possible for him to compete with another firm producing the same product that flouts labor laws, by using cheap labor, and by demanding higher working hours? Surely, he can keep his prices lower and our model firm trying to create an island of integrity would be at a disadvantage vis-à-vis the other firm. Corrupt practices are like giving a runner the unfair advantage of a head start. It is very difficult to motivate someone to emerge as an island of integrity in such a scenario.

So far we have discussed the various stages at which the issue of corruption in business practices can be intervened. In many ways these intervention mechanisms complement each other and may be simultaneously activated in the system.

In conclusion we would like to mention that perhaps the most effective step to banish corruption among the future generation is to educate the young minds about the malady and make them aware of the need to fight and prevent it: both as a perpetrator as well as a recipient of corrupt practices. Environmental awareness is sought to be created among the next generation by introducing EVS as a subject in school curricula. The need to follow incorrupt practices should be similarly inculcated among the children so that they internalize the idea and help build a corruption-free nation.

(Views expressed are the author's own)

Rana Som visits HCL

Shri Rana Som, the then CMD, NMDC, was received by Shri Anupam Anand, D(P), Dr Srabani Guha, CVO, and Dr A.B. Pal, DGM (Vig.)

As part of the Vigilance Awareness Week celebrations 2011, Shri Rana Som, CMD, NMDC Ltd, was invited to the Corporate Office, Kolkata, on 07.10.2011 to interact with the executives and to share his experiences with them. Shri Som had been the Director (Personnel) of HCL from 30.11.2000 to 30.11.2003 and the actg. CMD from 01.12.2003 to 31.03.2005.

In his address, Shri Som greeted everybody saying that Hindustan Copper was a place of his struggle, a place of his pride and a place of affinity. His colleagues in this Company were not merely colleagues, he said, but were also a part of his life. He fondly remembered of having worked with them closely in trying times. He thanked the CVO, Dr Srabani Guha, for having given him an opportunity to interact with the Copper family after a long gap of more than six years.

Shri Som reminisced that he had left HCL on 31.03.2005 and on that day the Board had met to announce a Net Profit of Rs 52.5 crore. Thereafter, he joined State Trading Corporation.

Speaking on Vigilance awareness, Shri Som said that the Chief Executive Officers of many a PSU consider CVC, CBI and CAG as the “three dirty Cs” without which, they feel, the progress of the Public Sector could have been better ensured.

He, however, strongly felt that these Cs are absolutely essential for functioning of the PSUs. The CVC, the CBI and the CAG ought to have the right to ask questions since the Public Sectors are owned by the State.

The PSUs are far better structured than the private sectors since they have to stringently abide by a given set of rules and regulation. It is this that brings in transparency to the entire system, he opined.

Once when he was in Hyderabad, Shri Som recalled of having a long chat with the Chief Vigilance Commissioner. Later, he returned to his office and jotted down the following points:

(1) To give equal opportunity to everybody without any discrimination -

to a buyer, seller or a service-provider.

(2) To adapt a transparent selection procedure.

(3) To protect the interest of the organization.

Once the above three criteria are met in all spheres of activities, the PSUs can easily live up to the spirit of transparency as inculcated by Corporate Vigilance, Shri Som summed up.

Shri Rana Som, the then CMD, NMDC, addressing the gathering of the employees of the HCL Corporate Office as a part of the Vigilance Awareness Week Celebrations

Ethics and corruption in Corporate Governance

Smt. S. Shyni

Superintendent of Police,
and Head of Branch,
Central Bureau
of Investigation

As part of Vigilance Awareness Week celebrations 2011, Smt S Shyni, Superintendent of Police, and Head of Branch, Central Bureau of Investigation, Banking Security and Fraud Cell, Government of India, was invited to the Corporate office to deliver a lecture on Ethics and Corruption in Corporate

Governance on 01.11.11.

Smt. Shynai hails from Alappuzha Kerala and is an IPS officer of 2001 batch. A Post Graduate in English and Journalism, Smt Shyni started her career as an IPS probationer under training at Sardar Vallabhai Patel, National Police Academy, Hyderabad. She rose through the ranks and was the Superintendent of Police, Central Bureau of Investigation, ACB, Cochin, prior to her current position.

Given hereunder is an abstract of her speech.

What is Ethics?

Ethics can be defined as a set of principles of right conduct, rules or standards governing the conduct of a person or the members of a profession.

What is Corruption?

Corruption is the act of corrupting or state of being corrupt. This is generally associated with public sector – abuse of public office for private gain. Being corrupt is all about lacking integrity, being unclean and contaminated. Lack of Ethics leads to corruption

What is corporate governance?

Corporate governance is the set of processes, customs, policies, laws, and institutions affecting the way a corporation (or company) is directed, administered or controlled.

Corporate governance is a term that refers broadly to the rules, processes, or laws by which businesses are operated, regulated, and controlled. The term can refer to internal factors defined by the officers, stockholders or constitution of a corporation, as well as to external forces such as consumer groups, clients, and government regulations.

What is Ethical Corporate Governance?

Ethical Corporate Governance refers to the processes and policies that a company has in place to deal with issues concerning how it is administered and conducts day to day business.

It is of essential importance to remember that companies exist primarily to create a product or service, which is used to generate profit. However that intention must be balanced with controls that ensure that a company pursues profit without crossing over into the realms of unethical behaviour.

Why is it difficult?

Ethical Corporate Governance is a tough call because of prevalence of corruption and indulgence by competitive partners. People tend to get easily tempted by easy money and short term benefits. Risks involved are pretty low. Low risk involved due to delay in trial, no certainty of punishment and low enforcement.

Types of corporate corruption:

- Individual corruption Vs Institutional corruption
- Bribe taking
- Bribe giving – Indians are worst bribe givers, globally in corporate businesses
- Record keeping, forgery
- Bank Frauds
- Misappropriations
- Nepotism, Patronage

Corporate Governance as tool:

Corporate Governance is a tool to combat corruption and is of vital in developing countries.

Corruption in public sector largely depends on willingness of private enterprises to pay bribes to public servants. Ethical corporate governance will put in systems to check flow of money from private sector in the form of bribes and will help set up institutions for control and enforcement. Voluntary private sector approaches are more likely to

make anti-corruption practices part of daily operations.

An integral part of an effective corporate governance regime may include:

- a) provisions for civil or criminal prosecution of individuals who conduct unethical or illegal acts in the name of the enterprise.
- b) developing appropriate strategies that result in the achievement of stakeholder objectives
- c) attracting, motivating and retaining talent
- d) creating a secure and prosperous operating environment and improving operational performance
- e) managing and mitigating risk and protecting and enhancing the company's reputation
- f) promoting transparency and accountability

What is required:

It is a moot point whether a developing country like India needs more regulations at this juncture or whether the nation shall be more benefited by voluntary initiatives to curb corruption, adoption of principle based standards by corporate houses and review of enforcement. Commitment to combat corruption, relevant communication and exemplary leadership can go a long way in the said effect. Already existent Companies Bill 2008 which promotes more disclosures and accountability, less government control and enhanced role of independent Directors, has a significant impact in controlling corruption.

There are ongoing demands that private sector be brought under Lokpal Bill when they are operating in areas of public interest. CVC is in favour of corporates being brought under Lokpal Bill. Talks are also on for making private sector corruption punishable.

Role of CBI in fighting corruption:

Special Police Establishment (SPE) was set up in 1941 by the Government of India to investigate cases of bribery and corruption in transactions with the War & Supply Department Of India during World War II. Superintendence of the S.P.E. was vested with the War Department.

Need for a Central Government agency to investigate cases of bribery and corruption by Central Government employees was felt after the war. The Delhi Special Police Establishment Act (DSPE Act) was therefore brought into

force in 1946. The DSPE acquired its popular current name, Central Bureau of Investigation (CBI), through a Home Ministry Resolution dated 1.4.1963.

Initially CBI was concerned only with corruption by Central Government servants. However, in the due course, employees of Public Sector Undertakings were included. With the nationalisation of the banks in 1969, the Public Sector Banks and their employees also came within the ambit of the CBI. From 1965 onwards, the CBI

has also been entrusted with the investigation of Economic Offences and important conventional crimes such as murders, kidnapping, terrorist crimes, etc., on a selective basis.

CBI's sphere of work includes Central Government Offices – Customs, Excise, Railways, Telephones, Foreign Trade, Employees Provident Fund, Central Public Sector Organisations – Oil Companies, Public Sector Banks, Public Sector Ports, Insurance Sector, etc, and public servants.

The Prevention of Corruption Act, 1988 - scope for prosecution of private individuals:

- Section 8 - makes punishable taking gratification, in order, by corrupt or illegal means, to influence public servants.
- Section 9 - makes punishable taking gratification, for exercise of personal influence with public servant
- Section 10 - abetment of Sec 8 and 9 by the public servant
- Sec 7 and Sec 11 relates to acceptance of gratification by public servants
- Sec 12 - Private individuals liable for punishment for abetment of Section 7 or 11
- Sec14 – habitually committing crimes enlisted under Section 8,9 and 12

Internal vigilance:

Internal Vigilance has an important role to play in curtailing corruption by preventive strategies, surprise checks, sharing of relevant intelligence, supporting departmental action and sanction of prosecution.

CBI is can be approached by lodging a complaint, text messaging (SMS), telephone call, e-mail and reaching out through other sources. For details log on to <http://cbi.nic.in>

Vigilance Awareness Week Pledge taking ceremony

*Shri A.K. Sen, the then ED, KCC,
administering the Vigilance Pledge
to the employees at KCC*

Vigilance Awareness Week-2011 was observed at KCC from 31.10.2011 to 05.11.2011. Shri A. K. Sen, the then ED, KCC, administered the pledge to the employees assembled at the Administration Building. administering the Vigilance Pledge to the employees*

Last year's success of C/o Conscience resulting repeat reprints emboldened us into another annual publication reporting on the activities undertaken in 2011 especially on the eve of Vigilance Awareness Week (VAW) celebrations 2011. Corporate Vigilance Department held its first ever public function in Kolkata, inviting school students into a daylong discourse on Corruption held at St. Xavier's Auditorium hosted by HCL's Vigcon team drawn from all across departments at the Corporate Office. While this was CO show, responsibilities were shared, the event details planned and worked out in advance and for every task there was a fall back plan including a substitute Chief Guest and the team delivered.

What did we learn at the end of the day? We concluded that we can and we will. Copper Family rises to the occasion as and when the situation demands. Of and on we may trip but we can pick ourselves up to move on. And so we will- that is the commitment we have made to ourselves. Jai Hind.

Vigilance Awareness Week Celebrations

Corporate Office

Shri K.D. Diwan, the present CMD, inaugurating Conscience 2011. Also present, were, Shri Anupam Anand, D(P), Dr Srabani Guha, the Chief Vigilance Officer and Smt S Shyni, Superintendent of Police, and Head of Branch, Central Bureau of Investigation, Banking Security and Fraud Cell, Government of India

Vigilance Awareness Week-2011 was observed at the Corporate Office from 31.10.2011 to 05.11.2011. The oath was administered to the employees by Shri K. D. Diwan, CMD, who also read out the message of Smt. Pratibha Patil, Honourable President of India. Shri Avijit Ghosh, D (Mining), read out the message of Dr Manmohan Singh, Honourable Prime Minister of India. The message of the Central Vigilance Commissioner was read out by Shri K.K. Saberwal, D (Fin.).

As part of the celebrations, Shri Rana Som, the then CMD, NMDC, was invited to interact with the executives of the Corporate Office.

Also, Smt S Shyni, Superintendent of Police, and Head of Branch, Central Bureau of Investigation, Banking Security and Fraud Cell, Government of India, was invited to the Corporate Office to deliver a lecture on Ethics and Corruption in Corporate Governance on 01.11.11.

As part of the celebrations, a daylong event namely, Conscience 2011 was organized on 10.12.2011, at the St. Xavier's Auditorium. The topic of the day for inter-school speech and Skit Competitions was, "Corruption-India's enemy within-Challenges and the way forward"

The programme was inaugurated by Shri K.D. Diwan, CMD (Op), HCL, and Dr Srabani Guha, the Chief Vigilance Officer, HCL, delivered the welcome address. A minute's silence was observed, at the outset, in the memory of the victims of the AMRI tragedy.

Also present, were S/Shri Anupam Anand, Director (Personnel) and Avijit Ghosh, Director (Mining), along with his family.

Shri K.D. Diwan, CMD, addressing the audience at Conscience 2011. Also present were, Dr Srabani Guha, the Chief Vigilance Officer and Smt S Shyni, Superintendent of Police, and Head of Branch, Central Bureau of Investigation, Banking Security and Fraud Cell, Government of India

The Guest Speakers of the sessions were Ms S. Shyni, Superintendent of Police and Head of Branch, Central Bureau of Investigation, Banking Security and Fraud Cell and Swami Vedaswarupanandaji, Ramakrishna Mission Institute of Culture, Golpark, Kolkata.

The schools that participated in the Speech and Skit Competitions included Don Bosco School, Gokhale Memorial Girls' School, South Point School, Patha Bhavan, Andhra Association School, Gurbachan Singh Sondhi Girls' School, Jadavpur Vidyapith, Mahadevi Birla Girls' Higher Secondary School, Mahadevi Birla Shishu Vihar and Frank Anthony Public School.

Mr. Kaustubh Bhattar from Don Bosco School, Mr. Arpan Banerjee from Patha Bhavan and Mr. Umang Daga from Don Bosco School stood first, second and third in the Speech Competition respectively.

In the Skit Competition, Don Bosco School, Gokhale Memorial Girls' School and St. Lawrence School stood first, second and third respectively. Trophies were distributed to the winners and the runners.

Medals, certificates and a prize-kit comprising of a pen-drive and "Wings of Fire" by Dr. A.P.J. Abdul Kalam, was given away to all the participants. Also, breakfast, lunch and tea were served to all.

On this occasion, Shri Amal Kanti Ghosh, DGM KCC and Shri Sitendu Dash, Sr.M

*.Shri O.N. Tiwari, DGM and Unit Head, MCP,
delivering the inaugural address*

(Systems) were present from the Corporate Office as the observers nominated by Dr. S Guha, the Chief Vigilance Officer. S/Shri S.N.P. Shahi, AGM (S&E), J.P.Gupta, AGM (Mines), Ajay Verma, AGM (Electricals) and P.G. Saha, union representative from BKMS, were the members of the jury. S/Shri S N Shri K.K.Joshi, Sr.Manager (Vigilance), welcomed the guests.

For the concluding ceremony, Shri P. Phulpagare, SDM, Baihar, was invited as the Chief Guest. Trophies were given away to the winning schools, by the Chief Guest Shri Phulpagare. Project Head, Shri O.N.Tiwari, DGM, MCP, gave away prizes to the individual winners. Shri Amal Kanti Ghosh, DGM (KCC) distributed gifts to all the participants. Mementos were presented to all the guests and the judges.

Shri Phulpagare hailed the move of Malanjkhanda Copper Project and praised the efforts by the Company towards good governance and spreading awareness about the demerits of corruption. He said that corruption is the biggest problem in India; the non-moving money was not being utilized for development of the nation, although the anti-corruption agencies were working but the participation of the common man is also very important. He stressed upon giving value-education to the children

*Shri O.N.Tiwari, DGM and Unit Head, giving
away the First Prize for speech Competition to
Km. Prerna Dave, Central Academy*

by both parents and teachers to be an honest, sincere and dedicated citizen. Shri Phulpagare was also happy with

the enthusiastic participation of such a huge number of children from nearby schools and congratulated the winners while encouraging all the participants and the teachers to take part in extracurricular activities and competitive events. He also thanked the Company for enabling him to be a part of such a noble cause.

On this occasion, Shri O.N.Tiwari, the patron of the event and the unit head highlighted the various measures taken by the Company to curb the malpractices in the official dealings. He specifically mentioned the use of technology in all sensitive dealings, like tendering, payment, procurements, etc., which not only gives greater transparency, but helps cut corruption to the root.

In the beginning, the guests were welcomed by Shri K.C.K. Joshi, Sr. Manager (Vigilance). As a Chief Observer, Shri Amal Kanti Ghosh, DGM (M&C), discussed the various facets of society and ethics during the course of progress of the human civilization. Shri S.N.P.Shahi, AGM(S&E), expressed his views on the level of performance by the competitors. Shri S.K.Verma, Sr.Manager (R&D)-PR, conducted the proceeding of the programme. Beside senior executives, large number of employees' trade unions office-bearers and the representatives of the Officers' Association took part.

In **TCP**, as part of the celebrations, Dr. Atul Fulzele,

*Chief guest Dr Atul Fulzele, IPS, Superintendent of
Police, Economic Offences and Special Crime Branch,
CBI, Mumbai, delivering his speech on the occasion*

I.P.S. Superintendent of Police, Economic Offences & Special Crime Branch, CBI, Mumbai, was invited to address the gathering on 02.11.2011 at 3 p.m. He spoke on the role of CBI fighting corruption. Speech of Swami Atmanishthanandaji Maharaj on Vigilance Awareness Week 2011 in KCC

Swami Atmanishthanandaji Maharaj, Secretary, Ramakrishna Mission Vivekananda Smriti Mandir of Khetri Ramakrishna Mission, was delivering the Vigilance Awareness Address as the Chief Guest of the occasion at HCL, Khetri on 05.11.2011

I am glad to listen to the excellent deliberations of the students regarding corruption. All of them have pointed out its ill effects. I shall try to focus on the possible ways to get out of it.

The degree of corruption in any society depends on three factors. The first is the individual sense of values. The second is the value embraced by society and the third is the system of governance.

On Individual Values:

In modern society, success is measured in terms of one's economic condition. An individual who has more money enjoys more fame, power and sense of enjoyment. But we should know that such a person takes away more from the universal life. A person who takes more from the universal life is measured to be less valuable to the society as a whole. On the other hand, a person is more valuable who contributes more to the universal life. However, in order to contribute something valuable to universal life, one needs to be aware of his own value by establishing oneself in the true self within.

India from the prehistoric times hold the view that there is a moral order or law governing the universe and only by living in harmony with it can man attain peace and prosperity; disharmony will lead to suffering. Life is a rhythm of exchange between individual life and universal life. Man must return, through selfless work, what all he receives from the universe.

In order to do this, attempts are being made to introduce value education in educational institutions. In value education, moral lessons are imparted to the students.

This is apparently an admirable venture. But it has its own limitations. Moral lessons are mostly based on do's and don'ts born out of compulsion or fear. Teachings based on compulsions and fears are against the dignity of man and that is why modern students are rejecting it. Swami Vivekananda has given a new approach to morality. He regarded morality is not something to be imposed from outside. Why a man should be moral? Because purity is man's true nature which is called Atman. It is the spontaneous expression of purity, divinity and goodness that is intrinsic to every soul. Why a man should do good? Because Atman is one and dwells in all beings. When a person does something immoral or selfish, he ceases to be himself, he lowers his own dignity, he loses the glory of his own self. Swamiji observed: "What is meant by morality? Making the subject strong by attuning it to the Absolute, so that finite nature cease to have control over us" (CW, vol. II, p. 137). Morality does not need any compulsion; all it needs is a conviction on one's true divine nature. Swamiji wanted that the knowledge of inherent purity and divinity of the soul should be imparted from the childhood. Swamiji said: "Teach yourself, teach everyone, his real nature. Call upon the sleeping soul and see how it awakens. Power will come, glory will come, purity will come, and everything that is excellent will come when this sleeping soul is roused to self-conscious activity". (CW, 3:193) Swamiji's intention was to give a spiritual orientation to education. Spiritual orientation automatically includes value orientation and there is no need to give value education separately. Spiritual orientation makes the practices of virtues most natural and meaningful.

The most important virtue of man is good character.

Swami Vivekananda emphasized that “The ideal of all education, all training, should be this man-making”. Lamenting over the prevailing system of education, he said: But, instead of that, we are always trying to polish up the outside. What use in polishing up the outside when there is no inside? The end and aim of all training is to

make the man grow (CW, vol.II, p.15). How to build a good character in life? A person is what his thoughts have made him. Everything a person does, every thought, every move, leaves an impression on the mind. When a large number of these impressions come together, they form a habit. This then becomes a powerful force, for character is but repeated habits. This is why, through the acquisition and repetition of desirable, one's character can be remodeled. Swamiji says, “The only remedy for bad habits is counter habits, all the bad habits that have left their impressions, are to be controlled by good habits. Go on doing good, thinking holy thoughts continuously ...Never say any man is hopeless, because he only represents a character, a bundle of habits, which can be checked by new and better ones”. (CW 1: 54, 207-8).

One of the best ways to form good habits is service to others. The ideal of service should form an essential part of the education system in India. Swami Vivekananda was the first religious leader in modern India to point out that the main cause of India's degradation was neglect of the masses. The upper classes of the society deprived the lower classes from education for centuries. He said, “so long as the millions live in hunger and ignorance, I hold every man a traitor who, having been educated at their expense, pays not the least heed to them” (CW, 5:58). At present it is all the more important to impart an attitude of service among the students. The wealth of Indian upper and middle classes is increasing after the liberalization of

Indian economy. This excess wealth if not used for the welfare of others it will cause degradation of individual and the society. Since the supreme spirit dwells in all beings, service to man is service to God.

On value system prevailing in the society:

In any society, a few people may be by nature moral and a few may be by nature corrupt, but most of the people adapt to the system prevailing in the society. An Indian who throws rubbish on the streets will never do so when he reaches America or Australia. A mass awakening to good manners and morality is vital for a healthy society.

On system of governance:

We must redesign our system of governance to check corruption. There needs to be the “high-risk, low reward perception” of the public for corrupt activities, through competitive salaries, severe punishment when detected, and publicity in the mass media.

The Silver Lining:

Though corruption is widespread, it is not that gloomy all over. The people in general have become conscious on the issue. The lawmakers are implementing several methods and laws to protect the society against corruption. Some such are:

- The Supreme Court judgment has made it mandatory for candidates in elections to declare their criminal records, educational qualification and wealth while filing their nomination.
- The application of information technology in the railway reservation system.
- The use of electronic voting machines in the General Election has reduced significantly the scope for corruption and malpractices in the election process.
- The passing of the Right to Information Act.

I personally hope that if we sincerely try and instill higher values among the youth, and introduce some strong measures of governance, the menace of corruption might be reduced to a considerable extent.

Fraud!!! Mole On A Clean Slate Retirement

Recipient of Vigilance Excellence Award 2012

S. Selva Kumar
Sr. M (Vig.), TCP

During routine checking of bills submitted by employees for reimbursement from the company, it has come to light that a superannuated employee had submitted forged documents for

transportation of his personal effects (household goods) post retirement. During investigation, it has also surfaced that although the employee had claimed to have transported his personal effects, the same were stored in the Company accommodation / Guest House facility at his place of posting, which he was occupying without authorisation even beyond his superannuation. Although he was occupying the Company accommodation, he had claimed and was sanctioned HRA during this period prior to his superannuation.

The employee has later deposited the entire amount reimbursed against his claim of transportation charges with the Finance department of the project. However, in respect of unpaid rents for occupying company accommodation and false claim of HRA, it has been assessed that further sum is also due to the company from the

employee. A Major Penalty Proceeding has been initiated against the concerned executive. Minor Penalty Proceeding has also been initiated against the executive who abetted the misconduct by allowing the

superannuated employee to store his personal effects in the company accommodation without any official records and without affecting recovery and at the same time also sanctioning the payment of HRA to the

concerned executive.

For the ingenuous method of investigation of the alleged misconduct involving various seemingly unrelated facets of the case, HCL Vigilance Team was facilitated with the "Vigilance Excellence Award, 2012" by the Vigilance Study Circle, Hyderabad Chapter.

TCP gets Vigilance Excellence Award 2012

Shri Pradeep Kumar, Central Vigilance Commissioner, awarding the Vigilance Excellence award to Dr. Srabani Guha, Chief Vigilance Officer, S/Shri N. Mukherjee, AGM, TCP, and S. Selvakumar Sr. M (Vig.), TCP. Also in the picture is Shri J. M. Garg, Vigilance Commissioner

The Vigilance Department of TCP received the Vigilance Excellence Award 2012 on 07.07.2012 during the 9th Anniversary Celebrations of the Vigilance Study Circle, Hyderabad. The award was handed over to the Vigilance Team, TCP, by Shri R. Srikumar, Vigilance Commissioner, Central Vigilance Commission, in a ceremony at the May Fair Hall, The Golconda Hotel, Masab Tank, Hyderabad.

The Vigilance Team, TCP, had submitted a case study, "Fraud!!! Mole on a Clean Slate Retirement" to the Vigilance Study Circle, Hyderabad on 19th April, 2012, and had consequently been chosen for this prestigious award.

The ceremony was attended by Dr. Srabani Guha, Chief Vigilance Officer, A.B. Pal, DGM (Vig.), CO, S/Shri N. Mukherjee, AGM, TCP, Mayukh Chatterjee, CM (Vig.)/CO, and S. Selvakumar, Sr. M (Vig.), TCP, from the Company.

Dr Srabani Guha, Chief Vigilance Officer, HCL, Dr A B Pal, DGM (Vig.), CO, Shri N. Mukherjee, AGM, TCP, Shri Mayukh Chatterjee, CM (Vig.), CO and Shri S. Selvakumar, Sr. M (Vig.), TCP, along with the Certificate of Vigilance Excellence.

VSC-HYD AWARD

Best Practices - Mid-Day Meal Scheme

Background

With a view to enhancing enrollment, retention and attendance and simultaneously improving nutritional levels among children, the National Programme of Nutritional Support to Primary Education was launched as a Centrally Sponsored Scheme on 15th August 1995, initially in 2408 blocks in the country. By the year 1997-98 the NP-NSPE was introduced in all blocks of the country. It was further extended in 2002 to cover not only children in Classes I-V of government, government aided and local body schools, but also children studying in Education Guarantee Scheme (EGS) and Alternative and Innovative Education (AIE) centres. Central Assistance under the scheme consisted of free supply of food grains @ 100 grams per child per school day, and subsidy for transportation of food grains up to a maximum of Rs.50 per quintal.

Objectives

The objectives of the mid day meal scheme are:

- Improving the nutritional status of children in classes I-V in Government, Local Body and Government aided schools, and EGS and AIE centres.
- Encouraging poor children, belonging to disadvantaged sections, to attend school more regularly and help them concentrate on classroom activities.

- Providing nutritional support to children of primary stage in drought affected areas during summer vacation.

To achieve the above objectives a cooked mid day meal is provided to all children studying in classes I-V.

Components of the revised scheme

The revised scheme provides for the following components:

- Supply of free food grains (wheat/rice) @ 100 grams per child per School Day from the nearest FCI godown
- Reimbursement of the actual cost incurred in transportation of food grains from nearest Food Corporation of India (FCI) godown to the Primary School subject to the following ceiling :
 - ◆ Rs.100 per quintal for 11 special category States viz. Arunachal Pradesh, Assam, Meghalaya, Mizoram, Manipur, Nagaland, Tripura, Sikkim, J&K, Himachal Pradesh and Uttarakhand, and
 - ◆ Rs.75 per quintal for all other States and UTs
- Provision of assistance for cooking cost at the following rates :
 - ◆ States in North-Eastern Region: @ Rs.1.80 per child per school day provided the State Govt. contributes a minimum of 20 paise.
 - ◆ For other States & Union Territories (UTs): @ Rs.1.50 per child per school day provided the State Govt./UT administration contributes a minimum of 50- paise.

State Governments/UT administrations are required to provide the above minimum contribution in order to be eligible for the enhanced rate of Central assistance mentioned above.

Vergheese Kurien, father of India's “white revolution”, died on September 9th, aged 90

MILK, and butter for that matter, are sacred substances in Hindu India. They make up daily offerings, and milk washes the feet of household gods. Newly married couples compete to fish for the ring in a bowl of milk. The god Krishna, as a child, stole butter from the household crocks. Within the primordial Ocean of Milk lay the nectar of immortality.

Vergheese Kurien had no reverence for it particularly. The government pushed him into it when he went, as a gifted student, for a metallurgy scholarship, and ended up answering a trick question about pasteurisation. (“Er...something to do with milk?”) To fulfill the scholarship conditions he went to work in the run-down Government Research Creamery in dust-filled Anand in Gujarat, where the machinery kept breaking down: hating the place, hating the life, hating that ever-curdling white stuff.

All the more ironic, then, that he was the man who revolutionised milk production in India, transforming the country from a milk-deficient place to the world's largest producer (with 17% of the global total), and along the way drawing millions of rural farmers out of poverty. Ironic, yes; but not, to him, surprising. Few others had his

tenacity, his drive, his sheer bloody-mindedness, to get government ministers and foot-dragging babus to yield to his ideas. No village panchayat, no landowner, no grasping corporatist, stood for long in his way. One minister of agriculture tried to remove him from the National Dairy Development Board, of which he was founder-chairman for 33 years; instead, the minister lost his own job. The saying in Delhi was, “Don't touch Kurien.” Once engaged in a knuckle-banging argument, he never gave in; and he never gave in, of course, because he was right.

It had all started in Anand, where, lonely and living in an empty garage, he started to befriend local farmers. (He understood Gujarati perfectly, he said, though he, a Keralite, chose not to speak it.) The farmers, struggling to get a fair price for their milk against the middlemen working for the Polson Dairy, had started a small co-operative. In 1949 Mr Kurien took charge of it, insisting—as only he could—that they bought a pasteurising machine for 60,000 rupees. The investment paid off; the milk could now reach Mumbai without spoiling; and the co-op idea grew apace. Farmers from other districts came to admire, and set up their own. Many

of these were landless labourers, whose only asset was their cow or buffalo; some were women, who thereby gained a little independence. In 2012 these tiny milk producers were getting the equivalent of 29 rupees a litre, three-quarters of the price paid for a pouch of full-cream milk by customers in Chennai or Kolkata.

Empowering the poor

This was not all his doing. The vital discovery that buffalo milk (much more common than cows' in India) could be dried into milk powder was made by H.M. Dalaya, not by him. But it was he who seized control when, after 1970, the EEC started sending its surplus milk powder and butter oil to India. In "Operation Flood", over 26 years, he sold these donations to finance a national network of 170 milksheds and 72,500 village co-operatives—which had grown, by his death, to around 150,000, with 15m members. Dumping by foreigners, which might have killed the domestic industry, thus enabled it to thrive. As an astrologer had predicted years before, when he read the length of his shadow at noon—not that he believed in all that—his career had taken off in an unimaginable way.

"Socialism" never described what he was doing. This was democracy: producers running everything themselves, the selling, the processing and, most of all, the marketing. Empowerment of the rural poor was his

real aim, and milk merely the best tool available. He avoided national politics, staying in small, dull Anand for years, even when his Amul brand of milk products had become the biggest food brand in the country, with the plump, polka-dotted Amul girl, bread and delicious butter in hand, cracking her jokes from hoardings all over India's cities. In Anand he was king, and liked it that way. At his house, he received prime ministers; at his Institute of Rural Management he forbade the students to hang out their washing or sit on the grass. His dairies, meanwhile, taught poor farmers to value cleanliness, discipline and hard work.

Liberalisation in 1991 came as an appalling shock. He had no intention of letting private companies back into the dairy business, strove to keep the co-operatives' local and regional monopolies, and dreaded competition from multinationals. India, he thought, was now defenceless. But he was old by then, and gradually lost the argument. Asked why the mood had turned against him when he was India's dairy hero, its *doodhwallah*, he would snap back, Why was Jesus Christ crucified? Why was Caesar stabbed?

His house in Anand was modest, though. The most precious thing in it appeared to be an autographed painting of Hillary and Tensing on Everest: another conquered mountain much like his, very big, very difficult, and very white.

What is Harvard learning from Mumbai Dabbawalas

A cooperative of 5,000 members, the dabbawalas of Mumbai, collect the filled-in dabbas from homes all across Mumbai and deliver them to requisite offices by lunchtime, which is 12.30 pm, travelling the length of Mumbai via the rail route. At 2 pm, they

retrieve the by then-empty dabbas and return them to their respective households, completing an estimated 2, 60,000 transactions in a city of 10.5 million people, accurately and timely.

Most of their workers are illiterate and the last major upgrade the 125-year-old organization made to its delivery chain was the bicycle. Yet, the Mumbai dabbawalas deliver and return 130,000 dabbas, or tiffins, every day.

According to Forbes magazine, they have a Six Sigma rating of 99.999999, which means less than one out of every six million deliveries goes amiss.

Since the publication of the article in Forbes in 1998, the dabbawalas have been the darlings of the international media scene. They have also been studied by the management schools around the world, all keen to learn just how they do it.

Lessons to be learnt from them are as follows:

Utmost dependence on Human Capital:

The most vital link in this chain of food delivery is human capital. The procedures could have been laid down over a century ago, but it is the implementation of the procedures that makes the system work. The Mumbai dabbawalas propagate that correct amount of human dependence can yield amazing results.

Discipline and Time Management:

The dabbawalas operate on the Chanakya system of Sama-Dama-Danda-Bhed for the errant members. This ensures that the errant member stays within the system. Secondly, they are extremely particular about time and realize the value of every second in the value chain.

Work as worship:

The dabbawalas' legendary dedication, which pushes them to dash through the streets of Mumbai laden with tiffin carriers in all manner of weather, stems from devotion. They view their work as worship. They are grateful to have work, and to serve others by delivering food.

Pride towards their work:

The dabbawalas take their role as 'Annadatas' very seriously. For them, the delivery of tiffins is much beyond

a job - it means quelling the hunger that strikes the customer when lunch hour approaches. And so they move about their mission briskly with a smile, making sure they are never late.

Honesty and Integrity:

The threads of integrity and honesty hold the dabbas together. Though it is lunchtime for dabbawalas also, the aroma wafting from the dabbas has never tempted them.

Overcoming a basic instinct like hunger is possible only because of strong roots in a culture that encourages truthfulness and integrity.

Recruitment policies and manpower management:

Over the years, the dabbawalas have become a growing community of busy delivery-men who carry out their work with honesty and commitment. This is because each person in the value chain is selected very carefully and with due recommendation only. The implication of the word 'recommendation' is different from the common parlance - the referrer assumes responsibility for the incumbent's conduct throughout the working life.

Sustained success will lead to fame:

The dabbawalas believe in doing their work properly and have been ensuring that the 'zero error' flag is held high. The one thing that emerges very strongly is that they continue to do their work without thinking about any gain. Maybe that's why success and popularity is chasing them.

Complete Contentment:

There is an unseen halo of positive vibrations around the members. The glow on their faces comes from complete contentment with their lives. They seemed as if they possessed all the happiness and riches in life. 'Be contented in what you have' is the principle that governs their life. This is particularly surprising because the members earn not more than 5-6 thousand a month and lead a very hard life compared to most of us. Still there is not even an iota of stress on their faces - quite contrary to many others who earn much more than them.

Musical Meditation:

The dabbawalas belong to a sect called Warkari that regularly chants songs of praise to the Lord. Their daily bhajan sessions seem to play an important role in relieving the day's stress. They truly embody a living where one looks beyond materialistic earnings and serves with commitment for a cause.

Life lessons from Narayana Murthy

When, one day, you have made your mark on the world, remember that, in the ultimate analysis, we are all mere temporary custodians of the wealth we generate, whether it be financial, intellectual, or emotional. The best use of all your wealth is to share it with those less fortunate.

I believe that we have all at some time eaten the fruit from trees that we did not plant. In the fullness of time, when it is our turn to give, it behooves us in turn to plant gardens that we may never eat the fruit of, which will largely benefit generations to come. I believe this is our sacred responsibility, one that I hope you will shoulder in time.

-NR Narayana Murthy in a speech delivered at the pre-commencement lecture of the New York University (Stern School of Business)

N. R. Narayana Murthy, outgoing chairman and mentor of Infosys at Infosys at Electronic City in Bangalore

- Seize your Gandhi moment
- You might fail, but get started
- Think big. don't hesitate to start small
- Cut yourself a slice, not a large one always
- Lend a hand and throw in a foot Too
- Own up, and then clean up
- Trust in God, but verify with data
- Keep the faith
- Get involved
- Sharing is caring
- Treat your people good, but your best better
- Hire a good accountant, even if he is argumentative
- When in doubt, disclose
- Leave the family out
- Don't be a pushover

- Make hay while the sun shines
- Brand-aid first, get clinical
- Mind your business, you'll see things coming
- Keep it simple, not silly
- Founders keepers, but not forever
- Talent spotting and division of labour
- Hold on to your people but don't cling
- Give, it only gets you more
- Do it first and do it right
- Get rich. Honestly
- Do not be afraid to court controversy
- Invest in learning
- Never lose the common touch
- Do good, look good

Mr. N. R. Narayana Murthy at the Indian Institute of Technology, Gandhinagar to interact with the students

Best Practices

Azim Premji to start two free schools in every district

After chipping in for the country's educational system for a decade, the Azim Premji Foundation (APF), run by the third richest Indian on his own money, is all set for a generous initiative. The foundation plans to start 1,300 schools across the country- two per district - which will be free, impart education in the local language and be affiliated to the state board.

If the idea succeeds, it could shame India's dysfunctional public education system - and perhaps inspire other wealthy tycoons to look beyond their personal status-building.

The APF schools, from preschool to class 12, will be on the lines of government ones. The difference will be in quality. "Quality education is fundamental to our becoming a developed nation. And the final crucible of learning is the classroom," says Azim Premji.

Wipro's idea of starting 1,300 schools came after the Azim Premji Foundation recently reviewed its work from 2001, the year in which it was set up. "We felt the need to graduate from programme interventions to institution-building," says Dileep Ranjekar, APF's CEO. "One of our ideas was to set up a separate educational board like the ICSE/ CBSE. But most of us...felt that change would be better felt and seen by actually setting up schools."

Those associated with the planning of this Rs 9,000-crore project say that the schools will focus on the overall development of their students, including their health and nutrition. "The attempt is also to establish schools in corners that are currently educationally under-served and not to compete with existing schools, whether public or private," says Ranjekar, adding that seven schools will start within a year-and-a-half in Karnataka, Rajasthan, Uttarakhand and Chhattisgarh. If things go as forecast, all the 1,300 schools should be up and running by 2025.

The aim behind the schools is two-pronged. "One is to build social pressure for other schools to follow suit and provide quality education. Two, we want to test ourselves, understand what it takes to deliver quality teaching and learning. One cannot tell the world to improve unless one actually leads by example," says Ranjekar.

A focal aim of the foundation is to get each school to evolve, over time, as a development centre integrated with the community. Thus, the schools will be staffed with teachers from the rural areas, but appointed after written tests and an interview.

"Emphasis will be placed on their expertise in the subject, their understanding of pedagogy and their social orientation. Parents of the children will be important partners in the process of development," says Ranjekar.

While India needs to revamp and overhaul its anti-corruption delivery system, it is even more important to revamp the education system. Without a holistic education system, India's greatest strength – its army of young people – could turn out to be its greatest weakness.

Kurian's Cochin Airport success story is B-school case study

Kerala cadre IAS officer V J Kurian's toil in building the Cochin International Airport Limited (CIAL), India's first green field airport in the private-public partnership, is now a case study for B-school brainstorming on managerial issues related to corporate leadership and ethics.

The case study "VJ Kurian & the CIAL Saga," was documented by Professors, P Rameshan and S Jeyavelu,

of IIM-Kozhikode, and sponsored by BASF, a German chemical MNC, under its 'Million Minds Project'. (<http://www.iimahd.ernet.in/publications/data/2001-10-05BijuVarkey-GRaghuram.pdf>)

BASF had undertaken the 'Million Minds Project' to spread the message of fighting corruption to one million Indian citizens. The study was also meant to inspire the young generation to fight corruption.

The study delves on Kurian who fought against all odds to set up a green-field airport that was destined to distinguish itself as a rare success story in public-private partnership in India. "The man was full of ideas, often totally novel. He knew how to implement them through team work and with the confidence of everyone in the organisation," said the case study.

The case narrates the victory of strong determination, persistence, leadership, financial discipline and the ability to translate ideas and plans into reality under tough situations and in the shadow of vested political interests. Kurian's innings at the CIAL gives hope to everyone, the study said.

Kurian, who was in-charge of the project since its embryonic stage, was shown the door soon after the airport became operational in 1999. His is also the story of a CEO who returned to the company he built brick by brick. He was brought back as the CIAL MD in 2003, when it was bogged down by a financial crisis.

One roadblock that India needs to demolish quickly is rampant corruption. Serious issues of corruption have been coming to light. Such brazen acts of corruption are a big deterrent to national prosperity and can damage the brand India story. While India needs to revamp and overhaul its anti-corruption delivery system, it is even more important to revamp the education system. Without a holistic education system, India's greatest strength – its army of young people – could turn out to be its greatest weakness.

Best Practices CBI officer with a difference

All eyes are on Mr V. V. Lakshminarayana, the soft-spoken officer of the Central Bureau of Investigation (CBI), who is leading the challenging assignment of the three biggest scandals, the huge Satyam fraud perpetrated by Mr B. Ramalinga Raju, the disproportionate assets case of

Mr Y. S. Jaganmohan Reddy and the illegal mining scandal by mining baron, Mr Gali Janardhana Reddy.

Mr Lakshminarayana, into his mid-forties, has been a topper from his school days. Operating out of Hyderabad, the IPS officer of Maharashtra cadre, selected Police Service by choice. He is known for his commitment to put in his sincere best at work.

After a sedate stint between 2006-2009, Lakshminarayana got catapulted into fame with the Rs 7,136 crore Satyam fraud. His thorough handling of the case that stunned not just corporate India, but the IT realm, helped unearth tons of documents and many clues that put the once invincible Mr Raju behind bars, unable to get bail.

Even before the Satyam saga ended, the CBI joint director was entrusted with investigating, under directions from the High Court, the disproportionate assets case of Y. S. Jaganmohan, MP of Kadapa and son of former Cong (I) strongman and AP CM, Dr Y. S. Rajasekhara Reddy,. Without bowing to pressure, he and his team questioned more than 50 corporates, rich and powerful individuals in just a little more than a month's time.

But the pre-dawn arrest of the seemingly invincible mining baron, Mr Gali Janardhana Reddy, at his Bellary residence in early September, undoubtedly brought out the meticulous planning ability of the team led by Mr Lakshminarayana.

An IAS topper of the 1990 batch, Mr Lakshminarayana comes across as a low-key person, warm to friendships and likes meeting old friends. But, when it comes to work, he never divulges official information. Given his dedication to work and expertise in legal issues, especially documentation and preparing the case, a lot is expected from this officer as the three cases gather momentum in the near future.

Best Practices Citizen Contact Centre: to make liaison with Govt. a pleasant affair

The Tamil Nadu government will set up a Citizen Contact Centre (CCC) in Chennai to furnish details to the public and for smooth delivery of services of its various departments. The project will extend services like grievance redressal, clarifications on government schemes, contact details of government offices and status of applications or petitions seeking services. The centre will provide the advantage of greater accessibility

through telecom and cellular services in rural parts and will ensure timely access to information, a helpline with local language capability and integration of services given by various departments onto a single platform. The project, initiated by the Ministry of Communication and Information Technology, will be implemented on a pilot basis in Tamil Nadu, Maharashtra, Jharkhand, Chhattisgarh, Rajasthan and Jammu and Kashmir.

Five men took on the big bad mining world

A 17-hour work schedule, visiting ports for days together, half a year of undercover investigations....the tough task of exposing the plunder of natural and monetary resources involved

almost round-the-clock sleuthing by five officers of the Lokayukta's investigation team.

Field investigations and reconnaissance started in August 2010 after the first report on illegal mining was released. Principal investigator U V Singh selected his team of officers based on honesty and interest in the area of work. But in the initial months, Singh visited the ports alone, in the guise of a lay person.

The team visited the ports of Goa, Bilikere, Mangalore, Chennai, Ennore, Krishnapattanam, Vishakapatnam and Kakinada several times. The highest number of fake permits was given to Krishnapattanam, Goa and Bilikere. They gathered an idea of the massive illegal exports taking place and knew they could do it smoothly. In October 2010, after alerting the income-tax department, they raided many mining companies.

The Eureka moment for the team was, of course, the raid on Bilikere port when two mining companies were completely exposed. Though the team did not travel abroad, they got information from clients abroad who imported ore.

When investigations were at a peak around April 28/29 2011, Singh got some calls and indirect messages that he would be attacked if he visited these ports again. The team worked for nearly 17 hours a day in those days. Most days would start at 9am and end at 2am.

During data collection, Singh travelled often, investigating on his own. Asked if his family was worried, Singh said, "I have grown-up children who are busy with their work. I am on my own. There is nothing to fear. It's all part of our duty."

The team did not celebrate after concluding the mammoth report. "There is no reason to celebrate. We will celebrate when justice is done to Mother Earth. For now, it's our duty," he added.

The famous five:

- UV Singh: IFS, chief, Lake Development Authority
- Bishwajit Mishra: IFS, Deputy Conservator of Forests, Bannerghatta National Park

- Vipin Singh: IFS, Deputy Conservator of Forests and project director, Karnataka State Wide Area Network, e-governance, DPAR

- K Udaykumar: Deputy Conservator of Forests, Lake Development Authority

- Takhat Singh Ranawat: IFS, ACF and OSD, Karwar

Source: <http://articles.timesofindia.indiatimes.com>

UV Singh report slams commercial tax dept:

Officers failed to track bank accounts of iron ore traders:

The U V Singh report on illegal mining has revealed that hundreds of bank accounts were operated by iron ore traders without the knowledge of the Commercial Taxes department (CTD).

When the Income Tax department conducted raids on mining companies last year, it found that the promoter of Sri Bhakta Markandeshwara Minerals had opened an account in

Pragati Grameena Bank to get a TIN number from the CTD. But it had carried out financial transactions of iron ore trade through three other banks without declaring them before the CTD.

It is observed that hundreds of such cases were found during the investigation wherein bank accounts operated by the traders (iron ore) were not reported to the CTD and it seems like no serious attempts were made in this direction, the report said.

"There are plenty of cases wherein even at the time of registration of TIN number, the details of bank accounts have not been given. All trade transactions are done through other accounts. This is a serious issue and the department shall take immediate action to collect account numbers of all iron ore traders, mining lessees, raising contractors, iron ore transporters, logistics providers, excavators etc., from various banks, mainly in Bellary, Hospet and surrounding districts, and Bangalore," the report said.

States Chase Raju's Ambulance Model

The erstwhile poster boy of the Indian IT sector, B Ramalinga Raju, may no longer be a benchmark for corporate governance but a model of emergency services conceptualised by him is finding greater acceptance. A growing number of state governments are opting for the public-private partnership model of ambulance services designed by Raju on the lines of the 911 emergency services in the US. Over the past seven years, 11 states have rolled out emergency services in public-private partnership with the Emergency Medical and Research Institute, an NGO started by Raju in 2005 and taken over by GVK group in 2009 after the Satyam founder went to jail for a multi-crore accounting fraud. Now, Uttar Pradesh plans to line up the biggest fleet of 1,800 ambulances by next year under GVK EMRI, which currently has a combined fleet of 3,147 ambulances. UP is

among the three states that are set to avail of the round-the-clock services that can be accessed through a toll-free helpline by dialing 108. The 108 services will soon become pan-India. Soon everybody will be calling 108 to get access to emergency services, said BN Sridhar, GVK EMRI's chief operating officer. He added that the emergency services supposed to be provided by the government, through the helpline number 104, are now non-existent. Besides the 24-hour ambulances mapped with hospital availability and a communication system with police stations to expedite legal formalities in accident cases, citizens can readily access online doctors to assist them in a medical or fire emergency.

Success of the Bicycle Scheme in the states and the Planning Commission recommendations

In Nitish Kumar's Bihar, there is a "Mukhyamantri Balika Cycle Yojana", now covering madrassas too. It was a scheme started in 2006.

Through this, girls who pass Standard VIII are given bicycles, once they enroll in Standard IX. More accurately, girls who pass Standard VIII are disbursed (through schools) Rs 2,000 to purchase bicycles and Rs 700 for uniforms. In three years, from 2007-08 to 2009-10, 8, 71,000 girls have got bicycles. It is a universal scheme, the only criterion being enrolment in Standard IX, with the submission of receipts for cycles and uniforms. So far, there haven't been any allegations about leakage through this conditional cash transfer.

There is also the case of Madhya Pradesh, where chief minister Shivraj Singh Chouhan who expanded an earlier scheme to provide cycles to girls started by his predecessor, Babulal Gaur, in March-April 2004. Gaur had started the programme among secondary school girls from the scheduled castes (SCs), scheduled tribes (STs) and below poverty line sections. On replacing Gaur in November 2005, Chouhan expanded the ambit of the scheme by gifting all class IX girl students with a bicycle.

In August 2007, Chhattisgarh chief minister Raman Singh also started providing bicycles to girl students and the programme yielded dividends in the 2008 assembly polls. Rajasthan's Ashok Gehlot has since begun a scheme to distribute cycles to class IX and X students.

The Jharkhand government is distributing around 2,00,000 cycles to students, mostly girls.

The Naveen Patnaik government in Odisha has started a programme to distribute bicycles to girl students and SC/ST boys of Class X in government and aided schools in 118 tribal-dominated blocks.

Similar programmes are there in Puducherry and Tamil Nadu.

However, not all incumbent CMs have benefitted from the cycle. Mayawati, who recently lost after five years in power in Uttar Pradesh, had begun a programme to distribute bicycles to poor students, later expanded to cover Muslim girls studying in 1,571 madrasas. She lost the recent elections to the Samajwadi Party-whose poll symbol, incidentally, was a bicycle.

The electoral success of free bicycle schemes for girl students in Bihar, Madhya Pradesh and Chhattisgarh could impel the central government to extend these.

A high-powered committee of the Planning Commission has, in fact, suggested that a central scheme should be devised through which bicycles could be provided to Muslim girl students, as their drop-out rate is much higher than those of boys.

"The envisaged new scheme at the central level could be rationalized and converged appropriately with prevailing state schemes", the planning Commission has said."

Indomitable Spirit - Dr. APJ Abdul Kalam

I was swimming in the sea,
Waves came one after the other
I was swimming -and swimming to
reach my destination.
But one wave, a powerful wave,
overpowered me;
It took me along in its own direction,
I was pulled long and along.
When I was about to lose amidst the sea
wave power,
One thought flashed to me, yes, that is
courage
Courage to reach my goal, courage to
defeat the powerful force and succeed;
With courage in my mind, indomitable
spirit engulfed me,
With indomitable spirit in mind and
action,
I regained lost confidence
I can win, win and win
Strength came back to me, overpowered
the sea wave
I reached the destination, my mission.

(This poem was composed during a flight from New Delhi to Bangalore on 28th August 2010. This poem emanated as an answer to a number of questions posed to me from the youth on various issues and problems like, poverty, disorder in the family, invasion on Indian culture, mistrust, corruption, violence, terrorism and Maoism, distrust, unconfidence and fear that are prevailing among the youth. This poem is mainly to address the fears among the youth.)

How P H Kurien took on global patents system to make very costly drug affordable for poor

It is said that only God and a few good men and women run India. One such man is P H Kurien.

For readers unfamiliar with his name, Kurien was India's Controller General of Patents,

Designs & Trade Marks until March 12, 2012. On March 9, 2012, just three days before he left office, he issued the first-ever compulsory licence in India for the manufacture of a drug still under patent. The licence authorized Indian company Natco to manufacture drug Naxevar for which Bayer, a German multinational company, holds the patent. This was an act of major significance for India's health.

Since March 3, 2008, when it got the Indian patent, Bayer has imported Naxevar, selling its monthly dose at the whopping price of Rs. 2,80,428 or \$5,420. Unsurprisingly, only 2% of Indian patients have been able to afford it.

In its application for compulsory licence to the Controller General of Patents, Natco offered to sell the monthly dose at Rs. 8,800 (\$170), a mere 3% of Bayer's price. Kurien obliged the numerous patients suffering from liver and kidney cancer, by ruling in favour of Natco.

To explain why this was a heroic act, we must look at the history of drug patents in India beginning four decades ago. At the time, in what was one of her few wise economic-policy decisions, Prime Minister Indira Gandhi replaced the then existing patent law, inherited from the British, by the Patent Act of 1970. The new Act entirely eschewed product patent, limiting patents in medicines to process. Henceforth, any company able to produce a drug via a process different from those patented by existing manufacturers could sell the drug in the Indian market.

Altering the process of production by reverse engineering in pharmaceuticals is a low-cost affair. The Patent Act of 1970 allowed Indian companies to manufacture and sell drugs at a fraction of the price charged by original patent holders, overwhelmingly foreign multinationals. That, in turn, spawned a substantial, low-cost pharmaceutical industry in India.

In 1959, a United States Senate Sub-committee headed by Senator Estes Kefauver had noted that when it came to drugs, India ranked 'amongst the highest-priced nations of the world.' Thanks to the Patent Act of 1970, drug prices rapidly tumbled, turning India into possibly the lowest priced country.

As early as the 1970s, American pharmaceutical companies had realised that as leaders in drug innovation, they stood to profit if they could get other countries to adopt the same high standards of patent protection as the United States. By the early 1980s, most developed countries had patent protection approaching those in the US. But since the developing countries continued to maintain low protection, American pharmaceutical companies began to lobby the US government to pressure them into implementing higher standards.

The Uruguay Round (UR) of trade negotiations provided the companies their big opportunity. They not only managed to place all intellectual property rights on the negotiating agenda but eventually succeeded in pushing the wide-ranging Agreement on Trade related Aspects of Intellectual Property Rights (TRIPs) as a part of the UR Agreements establishing the World Trade Organization (WTO). The TRIPs agreement required all WTO members to provide 20-year product and process patents on new medicines.

Its vilification as an obstructionist negotiator by the western press and governments notwithstanding, India fought hard against product patents on medicines. Though it lost that battle, it did score an important victory. It got inserted in the Agreement on TRIPs, a provision whereby member countries would retain the right to issue compulsory licence to domestic firms for a patented medicine if the patent holder did not provide the medicine at an affordable price.

In 2005, when India amended the Patent Act of 1970 to become TRIPs-compliant, it built this provision into the amended Act.

Natco applied to the Controller General of Patents for compulsory licence under this provision. This was the first such application, so Kurien was on uncharted territory. Luckily, earlier he had spent three years as a scholar at the Indian Institute of Science and appreciated the value of research. In addition to inviting Natco and Bayer to present arguments and evidence at a hearing that lasted 18 hours, spread over three days, he sifted through reams of articles by scholars and institutions globally.

SAVE ENERGY NOW

Energy conservation is of paramount importance in today's time. It is one factor that makes you competitive in the market place. It is a factor that demonstrates that you are a socially responsible organization. It is a challenge that we are constantly trying to meet.

Best Practices

Visually challenged boys experience the thrill of adventure climbing the Susunia Hills

The Blind Boys' Academy is a part of the Ramakrishna Mission Ashram located in Narendrapur, West Bengal. A residential academy, it offers general education as well as computer operations training, music, medical transcription, agriculture and other vocational training to all visually challenged young people.

Since 2002, an Award Programme has been successfully transforming the lives of the young residents of the Academy. Award Leader, Shri Chandan Mamunder, inspires us by sharing the exploits of 21 young award participants' expedition to the Susunia Hills.

A team consisting of Trainers, 21 blind students and 2 Award leaders, from R. K. Mission Blind Boys' Academy, Narendrapur, went to Susunia Hills in the Bankura District. Their mission was to complete the adventurous journey requirement for the Gold, Silver and Bronze levels of the award category.

Out of 21 Awardees, 14 are currently pursuing the Bronze level, 6 Silver and one, the Gold level.

The expedition was organized from 17th to 20th November, 2010 by the Institute of Climbers and Nature Lovers, who was also the

“Special Projects” partner.

The visually challenged youngsters participated in Climbing, Trekking, Rappelling, Single Rope Crossing, Monkey Crawling and Tent Pitching. They also visited the surrounding villages. Cultural programmes and other activities were organised during the Camp Fire.

The comfortable yet challenging expedition made the participants confident and they internalised values like team-spirit, integrity and cooperation.

Since the introduction of the award programme from 2002, all the boys at the Academy have taken part in the same and consider the entire experience 'priceless'.

The programme shapes the young leaders through active participation in playing the Sitar, swimming and learning through

touch, smell and sound.

The award aims to teach that merely receiving a certificate is not everything, but to broaden the mental horizons to believe that nothing is impossible, is all that counts.

All Is Well - The Ten Commandments

No matter the size of your company having a team of motivated, hard-working employees is crucial to your business success. There are 10 simple ways to ensure your team is enthused, productive, and ready to give their all

Build a foundation: It's important to build a rock-solid foundation for your employees so they feel invested in the company. Tell them about the history of the business and your vision for the future. Ask them about their expectations and career goals, as well as how you can help them feel like a part of the team.

Create a positive environment: Promote an office atmosphere that makes all employees feel worthwhile and important. Keep office doors open, and let folks know they can always approach you with questions or concerns. After all, a happy office is a productive office.

Put people on the right path: Most employees are looking for advancement opportunities within their own company. Work with each of them to develop a career growth plan that takes into consideration both their current skills and future goals.

Educate the masses: Help employees improve their professional skills by providing on-the-job training or in-house career development. Allow them to attend workshops and seminars related to the industry. Encourage them to attend adult education classes paid for by the company. Employees will feel you are investing in them, and this will translate into improved job performance.

Fun factor: Once in a while, put your work aside and do something nice for the people who work for you. Treat the office to a pizza lunch or take everyone to the movies. These little diversions can go a long way toward improving productivity.

Acknowledgement matters: You can make a huge difference in employee morale by simply taking the time to recognise each employee's contributions and accomplishments, large or small. Be generous with praise.

Give out incentives: Offer incentives, either with something small like a gift certificate or something more substantial such as a performance-based bonus or salary increase. Also, give out awards such as "Employee of the Month". Such tokens of appreciation will go far in motivating employees.

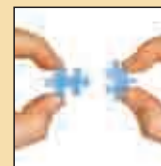

Deliver what you promise: Getting people to give their all requires following through on promises. If you tell an employee that they will be considered for a bonus if numbers improve or productivity increases, you'd better put your money where your mouth is. Failure to follow through on promises will result in a loss of trust.

Helping hand: Help employees reach the next level professionally by providing on-site coaching. Bring in professionals to provide one-on-one counselling, which can help people learn how to overcome personal or professional obstacles on their career paths.

Make the right match: You can improve employee motivation by improving employee confidence. Assign individuals with tasks you know they will enjoy or will be particularly good at. An employee who is successful at one thing will have the self-confidence to tackle other projects with renewed energy and excitement.

Employee Welfare Initiatives

- Refrain From Laying Off People
- Cross-functional Training Of Employees To Keep Them Engaged
- Counselling On Managing Their Personal, Financial Matters Better — A Necessity During Tough Times
- Celebration Of Success And Achievements To Boost Employee Morale, Even If The Celebrations Are On A Small Scale
- Felicitating The Best Performers — A Fillip To Make Them Continue To Excel

Aadhaar - UIDAI Strategy Overview

Creating a Unique Identity (UID) Number for every resident in India

The UIDAI – evolving an approach to identity

The Unique Identification Authority of India (UIDAI) was established in January 2009, as an attached office to the Planning Commission. The purpose of the UIDAI is to issue a unique identification number (UID) to all Indian residents that is (a) robust enough to eliminate duplicate and fake identities, and (b) can be verified and authenticated in an easy, cost-effective way.

Features of the UIDAI model

The Unique Identification number (UID) will only provide identity:

The UIDAI's purview will be limited to the issue of unique identification numbers linked to a person's demographic and biometric information. The UID will only guarantee identity, not rights, benefits or entitlements.

The UID will prove identity, not citizenship:

All residents in the country can be issued a unique ID. The

UID is proof of identity and does not confer citizenship.

A pro-poor approach:

The UIDAI envisions full enrolment of residents, with a focus on enrolling India's poor and underprivileged communities.

Enrolment of residents with proper verification:

To prevent problems of fraud and duplicate/ghost beneficiaries seeping into the UIDAI database, the UIDAI plans to enroll residents into its database with proper verification of their demographic and biometric information.

A partnership model:

The UIDAI approach leverages the existing infrastructure of government and private agencies across India.

The UIDAI will emphasize a flexible model for Registrars:

The Registrars will retain significant flexibility in their processes, including issuing cards, pricing, expanding KYR (Know Your Resident) verification, collecting demographic data on residents for their specific requirements, and in authentication.

demographic fields and on the biometrics for each new enrolment, to ensure that no duplicates exist.

Online authentication:

The UIDAI will offer a strong form of online authentication, where agencies can compare demographic and biometric information of the resident with the record stored in the central database.

The UIDAI will not share resident data:

The UIDAI envisions a balance between 'privacy and purpose' when it comes to the information it collects on residents.

Technology will undergird the UIDAI system:

Technology systems will have a major role across the UIDAI infrastructure. The UID database will be stored on a central server.

Benefits

For residents:

The UID will become the single source of identity verification. Once residents enroll, they can use the number multiple times.

For Registrars and enrollers:

The UIDAI will only enroll residents after de-duplicating their records. This will help Registrars clean out duplicates from their databases, enabling significant efficiencies and cost savings.

For Governments:

Eliminating duplication under various schemes is expected to save substantial money for the government exchequer. It will also provide governments with accurate data on residents, enable direct benefit programs, and allow government departments to coordinate investments and share information.

Enrolment will not be mandated

The UIDAI approach will be a demand-driven one, where the benefits and services that are linked to the UID will ensure demand for the number. This will not however, preclude governments or Registrars from mandating enrolment.

The UIDAI will issue a number, not a card

The UIDAI's role is limited to issuing the number. This number may be printed on the document/card that is issued by the Registrar.

The number will not contain intelligence

Loading intelligence into identity numbers makes them susceptible to fraud and theft. The UID will be a random number.

Process to ensure no duplicates:

Registrars will send the applicant's data to the CIDR for de-duplication. The CIDR will perform a search on key
